by Ron DeMar

In recognition of this being the year of the Special Olympics, a Special Olympic team "went public" on behalf of Special Olympics Thursday, April 5 at the America Center.

The Thunderbird, a worldwide sports training program for mentally disabled athletes, is sponsored by the Special Olympics. The team was organized by the Special Olympics and the Thunderbird is a program that promotes the development of the mentally disabled athlete. The team consists of 12 members from the Special Olympics, who are trained to compete in various athletic events. The Thunderbird is a program that promotes the development of the mentally disabled athlete.

The Thunderbird is a worldwide sports training program for mentally disabled athletes. The program is sponsored by the Special Olympics and is designed to provide athletic opportunities for mentally disabled athletes. The Thunderbird is a program that promotes the development of the mentally disabled athlete.

New computer course tunes up for the future

by Ina Latuseck

A new course offering, "Accounting and Record Keeping with the Computer," has been offered at Highline College to anyone in the community, without previous exposure to bookkeeping and the steps in the ledger of programming or prior experience with the COMPUCOLOR Library and asking for the Basic going to the sixth floor of the HCC and Record Keeping with the Computer," is currently being offered at developing about the feasibility and methodology for the student in running the programs in the General Ledger and Record Keeping with the Computer." Software has been designed, developed, tested and documented for accounting and record keeping on the COMPUCOLOR I1 micro-computer. A manual is available and is written in such a way that any accounting instructor could teach the course or instruct the student in running the programs in the General Ledger pack- ing about dropping her history class while she either found it hard to manage her wheelchair down the steep inclinations of the walkway, couldn't make it down the stairs. Finally her instructor and classmates met her at the top of the walkway every day and helped her down. Among the wide variety of assistance offered to handicapped individuals attending Highline are tutoring, reading, assistance from class-to-class, and independent study.

The oldest of Rehabilitation programs at Highline is the Parent and Vocational Education Training for Handicapped Parents. The program focuses on disabled or slightly mentally retarded parents who have poten- tially normal children, and teaches them basic parent child skills. "Most of the children are normal," Pierce states, "And we want to teach the children the best we can and the best way that we can do that is to help the parents." This outstanding program has been a huge success mainly because of its uniqueness and helpfulness making it one of 200 schools across the nation to achieve a Certificate of achievement by the Academy of Educational Development. The awards are to be announced this spring, and each of the programs will have a brief description written about it in the book published by those presenting the awards.

The idea of the program, developed eight years ago by the Parent and Childhood Education Division, has been a model for other schools. Representatives of institutions in and out of the state have visited and been impressed while many other places have replicated the program. Library (6th Floor) where the compu- ters are located. Microcomputers can be acquired by individuals and small businesses for as little as $4,000 to $5,000. Very little knowledge of programming or compu- ters is required in order to benefit, in some cases even without the use of a teacher. The class currently meets twice a week for one hour and fifteen minutes (3 credits) and classes convene at the

Rehabilitation programs offer diverse help

By Linda Surface

An interesting development on Highline College Campus has earned nationwide recognition and respect. Under the leadership of students, rehabilita- tion programs helping handicapped individuals have been in existence for about eight years.

Renna Pierce, Program Director of the Rehabilitation Mobility Assistance Training Program and overall coordi- nator of the Rehabilitation Pro- grams, explains that the two-year program is a built in service in which students are trained to work as instruc- tional aides with handicapped persons. Upon graduation, the students then seek employment in group homes, special education classes, sheltered workshops and other institutions that serve handicapped persons.

The program has five seniors and two graduates of that program have received their degree as well as the outstanding graduates from the Service Occupations Division. There are presently 35 full-time students enrolled.

The Rehabilitation Mobility Assist- ance Training Program is just one branch of the rehabilitation Pro- grams. "In general, we try to serve the handicapped student in whatever field they desire to be," Pierce projects. "We attempt to aid any handicapped stu- dents if need be. They need not be in our programs either."

In the past year, Highline College has undergone a few major alterations in their facilities. Accessible rest- rooms designed for the disabled persons needs have been built in, along with level walkways to aid persons in wheelchairs. The whole idea is to make the campus more accessible.

The program succeeds, those many handi- capped students found it too difficult to go up and down the steep walkways in their wheelchairs. "We had a student who was thinking about dropping her history class because she either found it hard to manage her wheelchair down the steep inclinations of the walkway, couldn't make it down the stairs. Finally her instructor and classmates met her at the top of the walkway every day and helped her down. Among the wide variety of assistance offered to handicapped individ- uals attending Highline are tutoring, reading, assistance from class-to- class, and independent study.

The oldest of Rehabilitation pro- grams at Highline is the Parent and Vocational Education Training for Handicapped Parents. The program focuses on disabled or slightly mentally retarded parents who have poten- tially normal children, and teaches them basic parent child skills. "Most of the children are normal," Pierce states, "And we want to teach the children the best we can and the best way that we can do that is to help the parents." This outstanding program has been a huge success mainly because of its uniqueness and helpfulness making it one of 200 schools across the nation to achieve a Certificate of achievement by the Academy of Educational Development. Registration system revised for Summer Quarter

By R.A. Smart

Highline College has devised a new way of registering for Summer Quarter. Instead of the old first come-first serve type of registration, this sum- mer it will be appointment only.

On Monday, June 1, the non-matriculated students will start the registration process and will continue until June 6. Then students who are currently en- roll are non-matriculated and will get their only chance to register on June 6.

Open season on the registration lines for the non-matriculated students will begin on June 15. Students who attempted to register on the fifth who did not succeed, will then have another chance.

Highline Registrar, Booker T. Watt, said that spreading the registration times over a week for non-matriculated students, should help to eliminate the long lines that plagued registration last area last quarter.

"While we are afraid we might get 2000 people in here (registration) on one day," Watt warned, "the program that the College should help to eliminate that." (The decrease of tuition this coming fall is not an area concern, according to Hightline head of security, Jack Chapman.)

"I am assuming that students will be doing for all the credits that they can get in a two year college before tuition goes up," Watt noted.

Another plus for matriculated students is that the week of June 8, enrollment for Fall Quarter will start, non-matriculated students and the general public will not be able to start registering until around September 8. Fall Quarter fees are $2,000 with ample parking, according to a Highline head of security, Jack Chapman.

As far as I can see, parking should be all gone for all classes, Parking will be on campus for the parking garages. The closing of the Midway drive-in for school parking."
Preschoolers have a day at the Fair

by Ron Del Mar

Kids from all over the area got a chance to have their day at a Children's Fair held at Highline College on April 25.

The fair, sponsored by the Parent Cooperative Preschool and the Parent Advisory Council of HCC, was a chance for the program's preschoolers and other youngsters from the community to enjoy their energy into a day of fun and learning experiences.

"It's a nice day for the children," Charlotte Silverman, instructor at the preschool, noted. "They don't have to pay for anything and it is local. LOTS of parents feel the fair is a lot better for the children than something like Disneyland, hectic and crowded," she added.

This is the fourth year that Highline has held the fair. Each year it has grown larger as the program was expecting close to 600 children to turn out this year.

Silverman couldn't have asked for a prettier day. On Saturday, a blue sky greeted the children who swarmed the fair grounds from all directions. The fair grounds were in reality the Plaza between the Library and Building 2.

A banner, skillfully mastered by the preschoolers, hung from Building 23, welcoming gleeful children and their parents who entered the Plaza. The banner read "The Children's Fair" and the artwork on it appeared to be the work of several amateur pre-juvenile fingerpainters.

The grounds were lined with tables, where each preschool participating had set up its own activities for the youngsters to engage in.

Around one of the more active tables, children stood in line to have their faces painted. Little boys and girls stood stoically while their least young faces were being transformed into what looked to be robot heads. Some of the children seemed to make them look like clowns.

An obstacle course, built by the New Lake Preschool, stood as a challenge to the coordination and excitation of the little tykes. Here they had to master a stairway before trying to crawl a treacherous six-foot bounce board. They then crept their way through a long and narrow tube which resembled a dilapidated roller coaster and finally struggled up a hill of rocks and beans. The walk across the beam could usually only be accomplished with the aide of parents, who incidentally seemed to be having as much fun at the fair as their children. The final obstacle was a tricky maneuver between several chairs.

Those with scientific inclinations found something to fit their fancy in the science activities. The artists in the crowd were not left out of the fun either. One activity had the children pour paint onto a sheet of paper lying in a cardboard box. A marble was placed in the paint and the box shaken about. The painted marble rolling similarly about the paper provided many designs.

Another artist booth had the youngsters create designs by splatter. The woodworking shop, set up by the Des Moines Preschool, was a favorite of the children, according to a typical morning rush hour scene.

As a student being tutored, Dave Brown, a tutor of mathematics, said, "I tutor because of a sense of accomplishment. I feel from being able to help others. As a tutor I receive a good review of mathematical principles that must be used constantly.

Brown also feels that tutoring on a one to one basis helps to build a student's confidence in their own abilities. He sees himself as being available as a tutor for the remainder of his time spent at Highline.

As a student being tutored, Dave Dell confirms Brown's statement regarding the confidence that one can receive from being tutored.

"The tutor and the student set as reinforcement for each other; they complement each other," Dell said.

Tutoring is a valuable resource for students, but like many programs, funding is the key to the existence of the tutoring program. In this case the Commission for Vocation Education is the source of the funding. To date, tutoring may mean a section of guidance because of the lack of funds to pay tutors for the one to one sessions.

Free tutoring services offered at HCC

by Lillie Parks

Tutoring can help students understand complex, non-native concepts and provide students with the opportunity to ask questions and receive help in specific subject areas.

As a part of the Division of Developmental Studies, the tutoring program, originally organized for the purpose of assisting vocational students, is now widely recognized and used.

"Students learn of the free tutoring service through instructors, counselors, and by word of mouth," Cassidy said.

Once the need for tutoring is recognized, Cassidy can be contacted in the fourth floor office of the library where she coordinates individual tutoring sessions.

A form of entrance level test is given to each student, hours are arranged and a tutor is assigned.

"Students are required to sign a contract of commitment indicating that they will take seriously the time devoted to them by the tutor," stated Cassidy.

Prior to becoming a tutor, the instructor of the particular subject and his division must give their approval of the tutor. In addition, the prospective tutor must attend the Tutorial Seminar class provided by Highline. The tutors may be outstanding students or authorities from off campus.

Danny Brown, a tutor of mathematics, said, "I tutor because of a sense of accomplishment and the feeling of being able to help others. As a tutor I receive a good review of mathematical principles that must be used constantly."

Brown also feels that tutoring on a one to one basis helps to build a student's confidence in their own abilities. He sees himself as being available as a tutor for the remainder of his time spent at Highline.

Space program is smart economics

by R.W. Davolt

The question of the space program is a question of economics. What benefits will touch how many Americans? Is it worth the investment? How can we justify the expenditure, looking at the deplorable condition of earth?

Ultimately, we can not afford not to reach for space.

As an investment, space exploration is difficult to talk about in terms of returns. Aside from the millions of aerospace jobs that depend on the program, direct results of the recent shuttle flights are largely still speculation.

In the sense that it is difficult to make immediate applications from laboratory results, we have no idea of the range of discoveries and innovations that might bloom from the flight of the Columbia. We do know that business and industry is very much interested in space technology. The first 48 shuttle flights, up to 1985, are booked solid with over a third of the contracts consisting of commercial communication satellites. According to the Department of Commerce, eleven American firms have signed contracts with 11,000 shuttle flights booked.

"The space program is one of the few taxpayer-supported programs which can show a greater return than the investment," says someone.

Some of these returns projected for the shuttle program are:

- The shuttle is expected to revolutionize the satellite business, which we have all come to depend on for television and telephone communications. Satellites can be launched, repaired and reprogrammed from space shuttle, and eventually from an orbiting space station and operations center, built with the technology and the help of the shuttle Columbia and her three sister ships. As some radio frequencies near saturation point and orbital positions for satellites become more crowded, this service will prove vital.

- Skylab experiments have shown that molten metals behave differently in weightlessness. Scientists believe that such an environment, highly purified, research facilities could be produced, improving the performance of electronics and computer components back on earth. Molten metal that usually sinks on earth might combine to form new alloys, replacing traditional metals.

- In such an environment of purity, new medicines could be produced. Ortho Pharmaceutical Company and McDonnell-Douglas have already devised an experimental system for hormones to combat heart disease and diabetes.

- The Russians have made no secret of their intentions to use space for military purposes. An estimated 80 percent of the Russian manned space effort has a direct military goal. While not so blatant, the United States can hardly stand idle by in the face of such a threat. The military applications for the space shuttle are linked mainly to satellite maintenance. Along with conventional spy, communication, and navigation satellites, the shuttle could be used for military purposes.

- In larger a sense, what could be more humbling than this? Reaching for the stars, the question of the space program is the question of the American ethic of productivity, and the sharing of the answers, or simply hope in something outside ourselves.

- Big business and government defense "hawks" have convinced us that we desperately need the space shuttle program. Just look at what's to be gained from our $10 billion investment.

- The United States has again been established as the world's "leading space power."

- The most immediate material result of the shuttle will be in the communications field. Scientists say telephone communications can be beamed directly to the customer, avoiding ground switching stations. This opens the possibility for more personal and effective communications.

Some engineers predict that many futuristic new cars will come stocked with "wireless telephones." People may also be capable of getting better reception on their television sets.

It may be possible to develop new alloys to solve the weightlessness of outer space. Because of the enormous deplorable condition of earth, their purpose may be best served in construction of additional useless space vehicles.

There exists a chance of developing new "extra pure" medical vaccines in space. Organizations such as the Cancer Research Institute could, however, make equally impressive breakthroughs here on the ground with a small fraction of that $10 billion investment.

"Defense" fanatics ignore the fact that we already possess a nuclear arsenal capable of destroying the world—500 times. They argue that the shuttle could be used for setting up research in satellite-based laser weapons. A nice thought, but spaced based laser beams would have difficulty reaching far less expensive plains. The laser beams would have to hover 500 feet above ground level. Nevertheless, the Air Force dreams of owning a fleet of space shuttles some day.

There you have it. Relatively pure gains in comparison to the price tag. The space gambol is a grand adventure. By taking a more realistic approach with technology and education, we will not only notice greater and more noticeable improvements than those gained by space programs.

Earth may some day be habitable. This is largely due to mankind's technology such as the space shuttle. If you plan to visit the moon some day, your government will have to decide to the new promised land, forget it. You are not rich enough!

Let's get down to earth. Too many problems and issues are at hand. Constructing such vast assets on additional space vehicles, however, will increase the need for the inner-city. Provide more educational resources, where most men boldly dare to stay!

Financial First Aid

by W.R. Davolt

Hold it. Time out. Stop right there. Halstes Sie ficka in die fume minutes.

I may be new at this college thing but something happened so strange about the criticism some students are taking from instructors about the time they spend working. If someone is knocking themselves out to pay my salary, I would either be sensitive enough to be grateful or not interfere with school.

A student who works pays tuition, takes classes, and is the ally of everyone from instructors to janitors to administration. Many community college students are property owners and almost all are paying voters. Kindly remove your teeth from the band that feeds you.

Struggling through college is nothing now, and in many ways the financial battle through school weighs on me. Many students didn't want the education badly enough. Many instructors must remember how it was for them.

Of course there will be times when occasionally the workplace will intrude on the classroom and surely the reverse will be true. But to say that work will never interfere with school or that it will always interfere are both extreme and misleading. The point remains that working one's way through school is an admirable thing and should be taken into account by the instructor in a positive manner.

The student who works is, more than any other, a faithful follower of the American ethic of productivity. We traditionally do not see what we can get easily. To hear an instructor expand the opinion that there is no reason for a student to have any employment other than the pursuit of knowledge, is to begin to realize what is happening in this country economy. The end result is a nation of well-educated non-producers.

We are seeing profound changes in our national life. Where once a student who didn't have to work could afford the luxury of four years entirely or primarily devoted to college.

Michael Fuda, "The space program is smart economics."

The space shuttle 'Columbia' was purchased for approximately $10 billion. Most of us can't comprehend the meaning of $10 billion. Imagine this: One dollar bills stacked one on top of the other to the peak of the Empire State Building. This would amount to only a single billion dollars.

Indeed, an unaffordable amount.

Big business and government defense "hawks" have convinced us that we desperately need the space shuttle program. Just look at what's to be gained from our $10 billion investment.

The United States has again been established as the world's "leading space power."

The most immediate material result of the shuttle will be in the communications field. Scientists say telephone communications can be beamed directly to the customer, avoiding ground switching stations. This opens the possibility for more personal and effective communications. Some engineers predict that many futuristic new cars will come stocked with "wireless telephones." People may also be capable of getting better reception on their television sets.

It may be possible to develop new alloys to solve the weightlessness of outer space. Because of the enormous deplorable condition of earth, their purpose may be best served in construction of additional useless space vehicles.

There exists a chance of developing new "extra pure" medical vaccines in space. Organizations such as the Cancer Research Institute could, however, make equally impressive breakthroughs here on the ground with a small fraction of that $10 billion investment.

"Defense" fanatics ignore the fact that we already possess a nuclear arsenal capable of destroying the world—500 times. They argue that the shuttle could be used for setting up research in satellite-based laser weapons. A nice thought, but spaced based laser beams would have difficulty reaching far less expensive plains. The laser beams would have to hover 500 feet above ground level. Aerobic Dancing

Strenuous exercise to modern music

by Ina Latusek

Aerobic Dancing, a form of strenuous dance routines, is one of the up-and-coming ways to exercise. New dance routines, is one of the up and-coming ways to exercise. New dance routines, is one of the up

by Ina Latusek

Highline Community College and throughout King County.

For students who don't like to do calisthenics, aerobic dancing may be the way to exercise. Warm-up exercises, which usually take the first ten to 15 minutes of the class, include some of the usual push-ups, sit-ups, and other calisthenics. As the heart rate at which you metabolize other fuel elements in your system such as fats, carbohydrates and proteins.

During an aerobic workout the heart rate is increased substantially, increasing the strength of the heart as a muscle. As the heart becomes stronger, its resting rate becomes slower because the heart is able to pump the same amount of blood throughout the body with fewer pulses. As the heart and body become even stronger students find they have more energy for all activities.

From a weight control viewpoint, it's more effective to maintain a well-balanced diet and exercise aerobically at least twice a week. Three to five classes a week would be even more effective.

Some exercises that may seem aerobic but may not be are tennis, racquetball and calisthenics. Aerobic exercises include running, biking, swimming laps, cross-country skiing, rope exercises and aerobic dance classes.

An aerobic dance class is offered at Highline Community College with Mary J. Sarver, instructor. "Aerobic Dancing is a new experience for me," said Sarver.

Students ride themselves of the regular calisthenics by ascertaining the musical way—aerobic dancing.

Photo by Diana Robinson

Sarver also teaches Social Dance and Folk Dancing. She has 20 years of Physical Education experience and has been doing her own choreographies for the class. She attends festivals in the summer learning new dance to implement into her own routines. By taking the class at HCC, a credit hour is received in P.E.

"The course (aerobic dance) will not be offered during the summer due to lack of funds," stated Don McConnealy, Chairman, Health and Physical Education Division. "But we plan to continue it in the Fall Quarter."

Sarver also indicated that the demand for dance classes in the summer is low due to the warm weather.

Students at Highline reflect enthusiasm with their comments about the class.

"I love it," exclaimed Debbie Keenish. "It is reasonably priced at Highline and you even get a credit hour for it."

"I just have to remember not to go over the next indicated that she was going to die; now I can exercise (aerobic dance) for an hour and feel good."

Mary Ann Elligsen, Des Moines, also a student of Bowser, indicated that she also "just loves it."

"I definitely will continue with aerobic dancing because when I come to class feeling tired," she exclaimed, "I leave feeling really relaxed."

The way most people find out the where and when classes are held are by word-of-mouth but other contacts are: King County Parks and Recreation Department; YMCA; The Body Workshop, Seattle; and Dance classes are requested to attend a conference. The instructors of Northwest Aerobic Dance Classes are requested to attend a CPR course.

"Some people—over-exercises themselves and it's necessary for us to know what to do," said Bowser.

"After an eight week session, the ladies are my friends," Bowser stated. "And after four years of teaching aerobic dancing, I have made a lot of friends."

Student of Bowser's class, Gloria Sling, Seattle, commented: "I just love it. I've been taking it since last summer and I have found it has increased my endurance.

When asked what she meant by increased endurance, she said, "the first time I attended class, I thought I was going to die; now I can exercise (aerobic dance) for an hour and feel good."

"DIRTY HARRY"

Story and Photo by Manley Wren

During a typical week Harry is under the constant pressure of being a patrolman on the streets of South Seattle. But come his days off, he and many of his fellow police officers, go into the field...a soft, field that is.

Dirty Harry, as he's known, hangs up his "duty blues" in exchange for dirty shoes and the more casual uniform of the diamond to journey to a field somewhere in Western Washington, where he competes against teams made up of policemen from other parts of the state.

At the annual tournament in Vancouver, Washington, Harry lived up to his nickname in one of the wackiest games of the year. With the field covered with a foot of water and mud, Dirty Harry and his team of Seattle's finest, presented spectators with one of the wackiest games of "dirty play".

"Through wins and losses, Harry and his colleagues are like thousands of other men in the Northwest, leaving the daily grind of their job to go on the diamond to hit a ball, slide into base and catch a moment of their past as "Boys of Summer".

"Boys of Summer"
Highline jazz festival draws a full house

by Will Hartley

A capacity crowd filled the Artist-Lecture Center on April 22 for the Highline Community College Jazz Festival.

The audience was responsive to the performance of Highline’s Stageband, Cornish BeBop Ensemble Section Three, and the debut performance of the Highline College Jazz Band.

The Stageband, under the direction of Ed Fish, opened the show with Jim King solos on the tenor sax. After the second selection, Descapage, a 5/4 time tune, the band was joined by highline music instructor, Marcus (Butch) Nordal on piano for Storm Warning, a composition by Nordal.

For their final number, the Stageband performed the dynamic "Promised Land," a Maynard Ferguson favorite.

Cornish BeBop Ensemble Section Three, a seven piece group from Cornish Institute of Allied Arts, entertained jazz enthusiasts with their light combos style.

All five of the members of Section Three were composed and/or arranged by members of the group, according to Julien Priester, ensemble director and trombone.

"I think that composing is a very good way towards learning the material," he explained. "As a result, they're more comfortable in performing as well as writing."

Priester is nationally known for his trombone playing, his name appearing on more than 50 record sleeves. He has also been on tour with several performing artists such as Duke Ellington and Herbie Hancock.

Hal Sherman, nationally known instrumental instructor from Kent-Meridian High School, directed the 19 member night school jazz band in an excellent performance.

Just in Time, the band's first number, was preceded by a Ferguson arrangement of My Funny Valentine with Bryan Barratine on the trumpet at centerstage.

Connie Weiss became the evening's only vocalist when she joined the jazz band for Please Don't Talk About Me When I'm Gone, a tune originally performed by Conni Basie and Ella Fitzgerald.

The Doors' "The End" sound like a pimple cream jingle, this is it.

"Killing Joke " by John Cale on A&M. Cale is classic proof that middle age and artistic decline need not coexist. The new lp by the 40-year old ex-Velvet Underground bassist is his best work in seven years. The album features bloodthirsty rockers (Russian Roulette), moving ballads (Winston), and talking Heads-ish funk (the title track), all sung in a dramatic, yet never pompous fashion.

Dinner at Spagheti Worldly, 11:30 to 1:30 p.m.

Friday's, from 12-2 p.m., the Women's Resource Center will be open for brown bag lunches. It gives women a chance to meet and talk with other women. Coffee and tea will be made available.

Vocation Information...

Students will have the opportunity to talk with area employers on a one-to-one basis at Highline College's first Job Information Exchange on May 7. From 10-11 a.m. and from 6-8:30 p.m., students will be welcome to discuss employment options related to both long and short term goals with employers chosen to represent the vocational interests of Highline students.

Part of the purpose of the Job Information Exchange is to increase employer awareness of Highline's programs.

For more information, contact Phil Swengel or Ada Well at 878-3710, ext. 217 in Job Placement, Bldg. 6, room 209.

Bach to Pop Returns...

Performing Arts will be giving a new 50-minute showing of "From Bach to Pop" at noon in the Artist-Lecture Center on May 14. The show will feature both instrumental and vocal performances.

The Cossatti-Gammii Quartet will be bringing more jazz to the Artist-Lecture Center on May 1 at 11:30 a.m. Everyone is welcome to attend this free performance.
Lycanthropy takes a dive with 'The Howling'

by Dave Middleton

The Howling, starring Dee Wallace and Chris Stone, will open May 8. The Howling's primary failure is not in its lack of scares. Making the audience quiver in their seats isn't the film's objective. What 'The Howling' sets out to be is a tongue-in-cheek satire on the werewolf genre—at this it with at least aiming for. What satirist on the werewolf genre-at this it with at least aiming for.

The opening half-hour might not have seemed so tedious had the film-makers hired some lead actors capable of breathing life into the cliches. Sadly, the key factor to the film's success. About her character's plight. To continue, the supporting cast fared better. Dennis Dugan displayed an understated friendliness in his role as Kareem's friend Chris, as did Belinda Belaski, who played Dugan's girlfriend Terry. The veteran actors provided most of the truly satisfying performances. Patrick Mcnee, John Carradine, and the irrepressible Slim Pickens all seemed to be having a fine time in the film. It's pity they weren't given better parts.

The trouble is that the film starts out with at least 30 minutes of rehearsed horror movie devices before establishing the humorous tone it seems to be aiming for.

Even less effective than Wallace was Chris Stone, who played her husband Bill. I realize it's unfair to expect a tour-de-force acting job from anything. Still, it is difficult to accept that a viewer is expected to get caught up in the action, empathy for the main character is a key factor to the film's success. But Wallaces's shadowy acting made it impossible to care one way or another about her character's plight. To convey a sense of terror, she relied on stock movements: herky-jerky body movements, hyperventilation, whimpering cries, and constant cries of "Oh, God!"

The Howling's tour-de-force acting job is Chris Stone, who played her husband Bill. I realize it's unfair to expect a tour-de-force acting job from anything. Still, it is difficult to accept that a viewer is expected to get caught up in the action, empathy for the main character is a key factor to the film's success. To convey a sense of terror, she relied on stock movements: herky-jerky body movements, hyperventilation, whimpering cries, and constant cries of "Oh, God!"

For those wondering where the NBC orchestra gets its large variety of jazz compositions, one of the answers is Marcus (Buddy) Nordal, Highline music instructor. "On occasion, I hear some of my material during the commercial breaks," he said, referring to the musical interludes on The Tonight Show.

Nordal's list of activities in the music world is impressive to say the least. His compositions are played and recorded by colleges and universities across the country. Some of the older big bands have also played my stuff," he added.

Peggy Lee, Sonny and Cher, Richard Harris, Dee Wallace, and a long list of show-bite types have known Nordal as an accomplished pianist during their road tours with them. Many movie soundtracks also include his piano playing.

Although Nordal's professional career involved a lot of popular music, his main interest leans toward jazz. Jazz is expressing yourself. It's spontaneous and emotionally intense. Nothing's prepared, nothing's contrived."

The album surprised me with its power. Gary U.S. Bonds. A notable example of this was when Brooks and Stone (in his one shining scene) have found something preferable to their acting. The story is based on a number of popular music, including the work of Van Zandt's songs.

Gary U.S. Bonds. The only song written by Bonds himself is Way Back When. It has many of the central themes that Springsteen use as well, making out, walking on the beach, and hitting the juke joints. Once again Clemon's comes through with some fine sax work.

The album surprised me with its power. Gary U.S. Bonds. A notable example of this was when Brooks and Stone (in his one shining scene) have found something preferable to their acting. The story is based on a number of popular music, including the work of Van Zandt's songs.

'Marvin Hordal of Allied Arts as well as several music oriented programs in the area. What does the song world for a man who's accomplished so much in the music world?" I want to seek something that would make me become a better musician."
Hard work brings good players to Highline

by Roger Haight

Coaches say that a lot of time goes into recruiting, but success justifies all the efforts. That success is measured in terms of the players that sign letters of intent to play for the coaches. This year, Highline men's basketball coach Fred Harrison has signed Charlie Marquard and Joe Callero. Women's coach Dale Bolinger has added four new players. Jal put Joe Calkro.

Men's assistant coach Paul Harrison said, "He did an outstanding job, he's a great win player. I can't thank him enough for all the work he's done." Harrison also credited his own basketball players for helping to recruit. "Our players are our best recruiters," he said.

Bolinger's new freshmen will add depth and size to the front line. The Armstrong twins are both seniors. They are younger sisters of Sue Armstrong, who has played center for Highline the past two years. Peggy Fokkema, 5'11", also has family ties at HCC. Her brother Amie is a 6'3" forward-center for the men's team. Snyder is the shortest new player at 5'9".

"With four guards coming back next year, I didn't actively recruit any more," Bolinger said.

Jan Armstrong was on the All-North Puget Sound League first team. She averaged over 20 points and 10 rebounds per game playing for Renton High School. Steer Trish was honorable mention All-NPSL.

Snyder, from Federal Way, was on the All-South Puget Sound League first team. Fokkema was on the All-SSPSL second team. She played for Federal Way.

"Want a good recruiting year? "I feel that is was," Bolinger said.

Harrison and Gerry actively recruited four people, according to the coach: Mike Merringer of Nasalle, Mike Merringer of Melrose, Marquard from Tylee, Bowmarch's Callero and Pete Hackett of Lakes. Merringer elected to attend Clark College, Marquard and Callero chose Highline, and Hackett had not yet chosen a school or even declared what sport he would play. Marquard is 6'8" and Callero is 5'8".

"I think we got two shining stars in the basketball players," Harrison stated. Callero was the Freshman Most Valuable Player and Marquard was on the All-Dominant Team. Both players made the Seattle Times all-star team.

"Callero is great with the basketball," Harrison said. "He handles it and passes it well. He's also an effective leader on the court. Charlie is a great shotter and a strong rebounder. I think he's the missing link that we've needed."

"These kids are real basketball players," he concluded. "They're going to be important to get people that enjoy playing. And they're nice kids, too. That's important to me." As many as seven of this year's freshmen could make it next year for the men's team.

"I'd like to think that everyone is coming back. But we don't know for sure. In April, September, we're looking to next year, he said, "I think we'll be much improved. We're starting some people who enjoy playing basketball. That's 50 or 75 per cent of the battle."

Men netters lose some close matches

In recent tennis action, the Highline men have either been winning big or losing by narrow margins.

On April 16, the Thunderbirds blanked Centralia, 7-0, and followed that up the next day by defeating Olympic by the identical score.

Surrounding those two lopsided victories, however, were four losses, all by a single match. Green River beat Highline for the second time this year, 5-4, on April 23. Western Washington University edged past the T-birds, 5-4, on April 15, and Tacoma and Fort Steilacoom both defeated HCC, 9-3, on April 14 and 20, respectively.

Next week the T-birds go on the road for two matches and return for the regular season finale here against Bellevue CC at 2 p.m. on May 9.

"Prior to this week's action, their won-lost record was 6-3."

HCC made a strong showing against powerful Green River. "We played dead even with the best team in the state," Coach Dave Johnson said.

In singles, John Tate and and Dave DuPuy each got a victory, and then paired up for another win in doubles. Tate beat Craig McClint, 6-2, 6-2, and DuPuy capped Frank Guard, 6-4, 6-0. The duo then beat Guard-McClint, 6-3, 6-3, 6-0, in doubles.

"Tate and DuPuy played well in singles and doubles," Johnson stated.

The other Highline victory came in doubles, where Steve Walters and Mark DeMeur combined to stop Scott Cadigan and Clay Rustin, 2-6, 6-3, 6-2. In the other doubles match, Bill Talbot and Jim Treasrull of GRCC beat Don Starch and Ed Fairbanks, 6-7, 6-4, 6-3.

In singles, Cadigan beat Walters, 6-2, 6-1. Rustin defeated DeMeur, 6-4, 6-2. Starch lost to Treasrail, 6-2, 6-1, and Talbot won, 1-6, 6-3, 7-5, over Fairbanks.

"This was our best effort of the season," Johnson said. "The highlight was first doubles. (Walters-DeMeur). They played just great. We're continuing to improve faster than the other teams."

Against Fort Steilacoom, Highline again fell one match short of winning.

Mark DeMers beat Rust Collin, 6-3, 6-1, and Tate won, 6-1, 6-2, over Skip Hulet.

Walters lost to Joe Thomer in three sets, 7-5, 2-6, 6-3. Fairbanks fell to Mark Scott, 6-1, 7-5, and Don Starch was beaten by Tom Scott, 6-1, 6-4.

The two squads split in doubles play. Fort Steilacoom won at number one as Thomer-Collins beat Walters-DeMers, 6-4, 6-3. Fairbanks-Starch won for HCC, beat Scott-Scott, 6-2, 6-0.

Highline was dominant against Olympic, losing only one set in the novice match. Walters-DeMers lost the first set of their doubles match, 1-6, to Joe Cameron and Steve Childers, then won the next two, 6-4, 6-3. Fairbanks-Starch beat Mark Kreifel and Dean Frey, 6-2, 6-0, in the other doubles match.

Walters beat Cameron in singles, 6-1, 6-3. Cameron is the number four ranked player in the Northwest in the 18-year old age bracket. DeMers defeated Steve Childers, 6-4, 7-5. Fairbanks topped Kreifel, 6-2, 6-2. Starch won, 6-2, 6-4, and Tate was also a winner, 6-1, 6-4, over Jim Knob.

"I really expected to lose at least one," Johnson said. "Especially since their number one singles and doubles are very good. That was a great win for us."

Highline's other shutout win was over Centralia, 7-0. Walters beat Scott Brickett, 6-0, 7-5. DeMers came back against Centralia, 6-4, 6-2. Fairbanks beat Steve Wending, 6-0, 6-1. Starhe clubbed Pete Campbell, 6-4, 6-1, and DuPuy beat Brian Faivre.

In doubles, Rustin defeated DeMeur, 6-4, 6-2. Starch lost to Treasrail, 6-2, 6-1, and Talbot won, 1-6, 6-3, 7-5, over Fairbanks.

"We'll be much improved," Johnson said. "We're starting some people who enjoy playing basketball. That's 50 or 75 per cent of the battle."
Track team finishes second

by Roger Haigh

It was a homecoming of sorts last Saturday for the Highline track team, and the men celebrated with a second place finish in the four team meet.

Chris Betney turned in a winning performance in the 880 with a time of 2:29 and placed second in the two mile run at 5:41.5. Bonnie Hendricks was second in the two mile run at 12:37.

Tomorrow, Highline is in a meet at UPS. Chris Betney is pleased with the progress of his team right now. "We don't have a lot, but it's coming now. We've got 10 or 11 freshmen that will be coming back next year."

Women's tennis keeps busy, defeats L.Columbia

by Steve Walters

Playing three matches in three days, the Highline College women's tennis team dropped in number seven to number four singles and Dailly at number five scored two losses.

Women's tennis keeps busy, defeats L.Columbia

by Steve Walters

Playing three matches in three days, the Highline College women's tennis team dropped in number seven to number four singles and Dailly at number five scored two losses.

"They were better," she explained. "They (the T-birds) were kind of off. The highlight was that we won.

Tennis win over the T-birds 8-1 on April 13 at Highline by winning all but two sets on their way to victory.

"We should have won," Adamson-Fetz stated. "All of the ladies were older and all play indoor. All the girls played like they had cement in their shoes," she continued. "We really didn't play very well."

Next Thursday, the T-birds compete for the championship at Clark in the Regionals.

"We don't have a lot of depth, so did Tom," Crubin said.

The run of the win by Joerg Hanson placed second and Greg Stark was third. Bob Miller and Tom Jackson both cleared 15 feet in the pole vault and tied for first and second, respectively. Randy Buegquist finished second in the 440 behind Love.

The returning sophomore netter was a 7-2 triumph while DeMeerleer and Rousseau went, 6-4, 6-2. Naikamura and Dailly went, 6-2, 6-1 and Boyd and Swain triumphed, 7-6, 7-0.

Highline had to work against stronger teams. "We played to our best ability that day," Cabin said. She clocked 51.7 seconds.

"I like to get it done, I don't do better against stronger hitting teams," Cabin stated.

The T-birds were defeated by Clark April 21, 2-6. at Pacific West's indoor court. "It's a little disappointing," Cabin said and that the highlight of the match was the play of Sue DeMeerleer, who defeated Susan Shadduck, 6-4, 6-0.

"She was extremely aggressive and dominated her opponents in six of the nine matches," DeMeerleer crushed Holly Kibbe, 6-1, 6-0 at Rousseau at second singles over Diane Balancet, 6-4, 6-2 and DeMeerleer and Rousseau in first doubles, who downed Shadduck, 6-3, 6-4 in straight sets, 6-4, 6-2.

Naikamura and Dailly both had tough singles matches as they both were defeated by identical scores of 6-1, 6-0. Swain came within a couple of points of winning her number six match against Chris Fullerton but came up short, 6-1, 7-5.

"Linds came back in the third set after being down 0-4," the former HCC netter turned coach said. "She served super and her volleys are improving."

HCC took all three doubles matches without the loss of a set. DeMeerleer and Rousseau went, 6-4, 6-2, Naikamura and Dailly won, 6-2, 6-1 and Boyd and Swain triumphed, 7-6, 7-0.

Abortion—Whose choice is it?

I think women have the right to do what they please with their bodies, but if a woman is in a position to make a choice, I think abortion is proper.

by Madeline Hans

Students wanting to enter the Medical Assistant Program in the fall of 1981, must be interviewed and accepted for admittance before the June 1 registration.

The Medical Assistant Program offered by Highline Community College, is one of five college programs in Washington State accredited by the State. These include North Seattle Community College, Edmonds Community College, and Kinman Business School in Spokane.

Financial aid cont.

We are taking a massive wave of applications and a medical evaluation on how well they can train to be a medical assistant. If a given student would fail the examination and could not perform, they have been struggling to keep up.
