Legislation cashes in on overloaders
by Ron Del Mar

As states toiling to find more than 10 credits of the Washington state legislature to avoid the Medicaid match penalty, a proposal that would allow students to earn over 10 credits in a quarter is under consideration.

Last quarter, 960 students took more than 10 credits at Highline. The hope is that by increasing the number of credits, the state will receive a larger share of Medicaid funding.

Legislative session 2007-08 has added the bill, Senate Bill 784, to the agenda. It passed last Monday after being narrowly approved by the Senate. The bill, which would allow students to earn over 10 credits in a quarter, is under consideration for adoption by the state legislature.

The change would mean that instead of the traditional 3-to-1 ratio, students would be able to earn more than 10 credits in a quarter. The potential benefits include more funding for the state's Medicaid program and additional opportunities for students to take more classes.

However, the bill has faced opposition from some members of the Senate, including Washington State Senatorpriority for high school students. The Senate Committee on Education and the Labor Committee have both reviewed the bill.

According to Ron Del Mar, the bill's sponsor, the changes would be beneficial for students and the state. "It's a way to make sure we're getting our fair share of funding," he said. "The state can't afford to lose money on this, and students need more opportunities to take classes."
**Thunderword FOCUS: Jobs...**

**Where the jobs are**

by Bob Ridge

College students graduating in 1982 will find technical oriented jobs easier to obtain than liberal arts positions, according to a recent national survey.

The National College Placement Council recently announced that the greatest demands for college graduates in 1982 will come from the technical, scientific, and business job markets. The NPCC said that liberal arts and humanities positions, although still available, have declined sharply in the past year as compared with the increased number of technical job offerings.

According to a recent US News and World Report survey, the fields of business, engineering and technology departments, said that the electrical engineering field has considerable growth potential.

"The electrical field is increasing more and more," he said.

Michael Cicero, chairman of HCC's business department, said that he sees the business field as fairly stable. He predicted that there will be no major changes in business employment as long as the current economic situation continues.

However, Cicero said that business careers, particularly clerical work and accounting, are all promising professions to a hopeful graduate.

"We are a business oriented society," he observed. "I don't think is the immediate future."

According to Cicero, experience plays a major role in decisions to hire new employees. He said that a student wanting to enter the business world should have some previous experience in order to have a greater chance of getting a job.

Prospects are not as hopeful in non-technical fields, however. According to the NPCC, the demand for liberal arts majors with a B.S. degree in English is likely to continue for 30 more years. The US News and World Report survey revealed that even though the field of education, technically trained instructors are more likely to succeed in finding jobs.

Teachers of science, math, and physics have a better chance of employment than others trained in humanities, according to the survey.

**Park project postponed**

by Randy Akimoto

The North Sea-Tac project, which is prepping numerous recreation areas, must get more volunteers before additional facilities can be constructed.

Initially a promaster plan for the project was finalized on January 3, 1980, disclosed Dave McNeal, principle-in-charge of the Master Planning Team for (Landcape Architects) Jongejan/Gerrard/McNeal, Inc. "Our idea was to be a buffer zone can be installed by the Port of Seattle to help out."

Despite some favorable reviews by the Port of Seattle, McNeal believes there are still those who will oppose the project. "I understand there are ongoing forces," he admitted.

His proposal lists among other things, controversial activities, such as a possible motorcycle training site with a capacity for twenty two persons. Volunteers who have paid for street lights have seen their efforts shuttered by vandalism. Eventually Harper would like to see just one entrance to the park and is hoping a buffer can be installed in the Port of Seattle to help out.

"We're fighting the place and we need lots of volunteers," he concluded.
and future opportunities

Medical Assistant

Preparing students to work in medical offices is a theme that the Highline Community College Medical Assistant program stresses.

According to Program Director Carol Warden, students learn to perform various medical office tasks such as medical reception, bookkeeping, and clinical duties.

"This is an excellent program for anyone considering a medical field," she said. "The employment opportunities are unlimited."

Available in the Student Advising Center is a two-year program outline for the Medical Assistant, Associate of Arts in Applied Sciences. The outline shows the recommended quarterly schedule of classes.

Graduates of this program are prepared for an entry-level position as a Medical Assistant and qualified to take the Medical Assistant Certification Exam.

Warden says that the best time to start the program is Fall Quarter. Those waiting until Winter or Spring Quarter may have a harder time getting in.

-Karen Beling

Hospitality/Tourism

Bar management is one of the many career opportunities students are exposed to in the Hospitality/Tourism program.

Program Director Nad Fraley Borges said the class explains "the better's liability in the pattern."

Recently the class attended a mini-course at the Rainier Brewery.

In order to receive a certificate of completion for the mini-course, each student was required to pitch a pitcher of beer. One student broke the all-time attendance record.

Trish Armstrong

Multi-Cultural

The multi-cultural service at Highline Community College offers more than just language minority groups.

Lee Pipe, the advisor of the multi-cultural service, has worked with Student Placement for job opportunities.

"We are here to help students with their education requirements," she said. "We have gone to multicultural services in search of a job."

-Michael Newby

Foreign Language

Students foreign language training can be beneficial in the job market.

Highline Community College students should realize that there are many jobs that foreign language training is required or extremely helpful.

These jobs range from U.S. Government intelligence to professional interpreters.

Many students are taking a foreign language as a requirement in order to fill a high school deficiency so they may attend a four-year college which requires it.

-Cheryl Bleakley

Data Processing

Most students in the Data Processing Program enter the field of computer programming.

There is always a need for people to work in this type of business. Local businesses that use computers are Boeing and IBM.

Another field available through the Data Processing Program is computer operating, according to Program Coordinator Kenneth Milthom.

Another field is that of computer sales. An example of this is working in a retail outlet that specializes in computers.

-Deanna Warne

Math

Although a student could probably find a job in the field of employment using mathematics skills, a four-year degree is needed for employment as a mathematician.

Math must be used along with some other discipline such as Math and Computer Science, or Math and Business, or Math and Physics or Chemistry if the student plans to go to a college or university for a degree.

Some students enter college with such a high degree of math skill that after one semester at the most advanced math courses HCC has to offer, according to Morris.

In order to encourage these students to continue their work, a special course for those who are not prepared for the regular program is Computer Simulation, Logic, or Math Applications.

-Araneo Ivanov

Marine Technology

Graduates of Highline's Marine Technology program stand an excellent chance of finding work these days, according to Maurice Talbot, the department chairman.

"The program is currently placing 65 percent of its graduates, a majority working as underwater construction specialists for the major oil companies," he said. "About 90 percent go directly to the Gulf Coast in Texas and Louisiana, where the other five percent go overseas."

Highline graduates have a clear advantage in job placement since Highline is one of only three two-year programs in the country.

-Jeff Keenan

Admissions

The large increase in college applications at Highline Community College could be the result of unemployment.

"Being unemployed gives people a chance to reflect. People often return to school, possibly for more promising future employment," said Admissions Coordinator Sandy Currie.

"This is an excellent program for anyone considering a medical field," she said. "The employment opportunities are unlimited."

-Michael Newby

Business

Many people that are business majors at Highline have jobs that are related to their career choice. This gives those people an advantage over people going into the field with just a degree.

People are getting high paying jobs right now and there is a reason why Highline graduates shouldn't be a part of the new job force, according to Mike Cruoz, department chairman of the business division.

"Business is a very competitive career. Therefore, students coming out of college with a degree and some work experience have a better chance of landing a high paying job in the future," he said.

-Fred Harrison

Information Services

Opportunities may be limited, but the future for Information Service people looks "rosy," said Don Reicks, library director.

Because of cutbacks in government funding, the job market for librarians is limited at the present time. However, librarians need a masters degree to get a job and they must have a computer terminal.

"Highline has a lot of success with the library program, in fact we have more people than the University of Washington," said Reicks. "Right now the only exception to the job market for library technicians is business libraries."

-Theresa Jones

Social Science

Job opportunities appear to be better in the legal area than in the social sciences.

"Math must be used along with some other discipline such as Math and Computer Science, or Math and Business, or Math and Physics or Chemistry if the student plans to go to a college or university for a degree."

-Don Gipper

Women's Programs

The Job Search Support Group meets in the Women's Resource Center Mondays from 3:40-3:50 p.m.

Headed by Betty Colomans, director of Women's Programs, and Kelly Keane, this group is for people actively looking for a job.

The Job Search Support Group works not only as a source of employment information, but also as a moral support group for those out in the job market.

Membership is free, and open to the public. Men are welcome.

-Denise Huston

Developmental Services

The foundation to a majority of educational programs at Highline Community College is the Developmental Studies Division.

According to the division chairman, Pam Arneson, the Division is the support unit, to students whose basic skills do not suffice, in order to further their education or meet personal goals.

"Our programs educate people in such things as political science, social science, and mathematics, and helps them to think critically, and learn to think critically," said Arneson.

"Our programs are designed to help students improve their basic skills, which are essential to function in society," according to Arneson. These skills include the basic reading, writing and arithmetic, which are learned at all levels.

-Scott Byers
Students have the power...

by Bob Wayne

In the 1960's it was on college campuses that a movement began to turn public opinion against a disastrous war. What began as essentially a "youth movement" eventually led to the withdrawal of American troops from Southeast Asia and the end of the Vietnamese War. This nation has experienced what power angry, disillusioned students can have over national policy and over the course of world history. This power is a matter of fact and of historical record.

Will this vast power闲置 while armies of accountants emasculate the American educational system? Will the voice of American students remain silent while the foundations of our political system are threatened? How long can the noise of the class be heard from denizens convinced that they have neither the right nor the ability to speak on their own behalf? Have we been patronized long enough? We have said that we are interested in the ways of government long enough. We do not want to be forced to behave like servants or be dismissed as delinquents.

Campus crime figures reflect a growing restlessness in colleges across the country, not unlike the tension and frustration preceding the flaming campuses of the '60's. Once that frustration and tension were recognized as a direct result of attitudes and policies in the schools, the people of Washington will see the meaning of the word "fury." We are not stupid and we are not impotent. If, and if we have, to the students of Washington will drag this horse and buggy state government into the 20th century.

It seems like I am threatening our beloved Governor Spilman and esteemed Legislature with campus unrest if further clashes are made at basic education, let there be no misunderstanding. I am. Let every college, university and public school in the state rise up with one mind to force their public servants in state and federal government to fulfill their constitutional responsibilities in fund education. In a society which requires more specialized and technological training it is unreasonable and irresponsible to understate this state's educational system in favor of smoother roads, balanced budgets and nearly trimmed parks. There can be no greater priority for this state than the education of its future generations.

by R.W. Davolt

One can only hold back a laugh when seeing old news clips of anti-Vietnam demonstrators and their foolish signs saying, "Peace Now" and "Stop the killing in Southeast Asia." For them, all that needed was world power for peace by U.S. troops to leave Southeast Asia. For them, all that needed was world power for peace by U.S. troops to leave Southeast Asia. For them, all that needed was world power for peace by U.S. troops to leave Southeast Asia.

Actually, they didn't really care what happened to the people of Vietnam, they just wanted Americans out. The war and the suffering did go on after the United States withdrew from Saigon. The Vietnam War is still going on today, we're just not in it. It's hard to believe our public servants in state and federal government to fulfill their constitutional responsibilities in fund education. In a time when society requires more specialized and technological training it is unreasonable and irresponsible to understimate this state's educational system in favor of smoother roads, balanced budgets and nearly trimmed parks. There can be no greater priority for this state than the education of its future generations.

* Thunderbird* 1982

Dear Editor,

Thank you for the informative article on Hospitality and Tourism Management appearing in January 22, 1982 edition. There are two statements which I believe may have been misinterpreted.

1. "N供销's Hospitality and Tourism program has shown, over the years, a continual increase in both student enrollment and industry hiring, des-

pite the current downturn in regional economic activity and the upscale competition, hospitality and tourism managers have college education as the necessity of the business in such that the degree person has a much higher career success rate. Hopefully, this letter will clear up any misunderstandings. Keep up the good work.

Sincerely,

Edward Buckley-Purges

Misinterpretation cleared up

Pro
Thunders
As a matter of fact, just lay off...

by R.W. Davolt

Just because I am a writer don’t assume that I have never tried to earn an honest living. As a matter of fact, just lay off. It’s been a bad few weeks in newspaperland.

First, Emmett Watson, columnist laureate of the Seattle Post-Intelligencer, announced his semi-retirement from the newspaper whose financial missteps have made headlines for too long. Local dailies. After the recent round of hearings at the state capitol, it would be nearly impossible for any veteran to draw full benefits.

Second, Emmett Watson himself walked into the store and we talked for the first time. The Seattle Sun, I have read for years. Emmett Watson, columnist laureate of the Seattle Sun, walked into the store and we talked for the first time. Although I disagreed with nearly every word ever printed in the Sun, I have read it for 20 years. This is the losing an old friend and sparing partner. It has been said that if writers were better businessmen, they’d have more sense than to be writers. As for me, I work part-time in a clothing store waiting for the day when I will either graduate or this column will be picked up by national syndication.

The other day Emmett Watson himself walked into the store and we talked for a minute about writing columns and which sport jackets were on sale. I was ecstatic. And to scribble some notes down for my next column before the creative spark cooled in the hand that had shook his. The man had been a part of Seattle for over 20 years, a landmark, so to speak. Eventually my enthusiasm was damped by the fact that I had to explain to everyone in the shop exactly what Emmett Watson is. And also the fact he didn’t buy anything.

Then there’s this thing. The Seattle Sun going down for the third, and from what they say, the final time. The plucky and rather left-wing weekly had been in financial straits from almost the first day of operation. Although I disagreed with nearly every word ever printed in the Sun, I have read it for 20 years. This is the losing an old friend and sparing partner. It has been said that if writers were better businessmen, they’d have more sense than to be writers. As for me, I work part-time in a clothing store waiting for the day when I will either graduate or this column will be picked up by national syndication.

VA benefits extended

Cont. from page 1

extension receive training to the entry level in a vocation in the minimum amount of time. Therefore, the types of training available are limited to certificate programs or the generally shorter degree programs." This refers to courses such as barbering or welding offered in barber or technical schools. The problem with this program is that, at least in the certificate programs offered at Highline College, it would be nearly impossible for a veteran to draw full-time benefits. The veteran would have to enrol in additional classes which would entail outside work along with the regular, in-class work, required by courses such as barbering. "Watt said. He also noted that if the student also had an outside, part-time job, it would be very likely they would be doing in 11 or 12 hours a day just in school and work, not including any necessary travel time to and from the campus and work place.

This program is scheduled to expire December 31, 1983, which means if a veteran had a two-year program to complete for a certificate or apprenticeship program, it would be Spring Quarter 1984 before they could begin and would possibly not be able to finish.

According to figures provided by Edgeron of the VA office in Seattle, this new law will help only two percent of the veterans in Washington State.
The Journalism/Mass Media Department has only been a state approved Occupational program since 1980, but this year marks the 20th anniversary of The Thunderword as it is now printed. Though the focus of this centerpiece is the Public Relations/Newswriting division of the Journalism/Mass Media Department, an Advertising/Media Selling degree is also offered.

Since 1970, the Thunderword has gained national recognition through critique services and contests. Twice voted the best 2-year college newspaper in the nation, Highline's journalism department draws students from all over Western Washington.

The Effects of Gamma Rays on Man-in-the-Moon Marigolds, the Pulitzer Prize winning drama by Paul Zindel, is now playing at the Centerstage Theatre through February 27.

by Kevin Kerr and Will Hartley

A common practice in the entertainment industry is the consistent, predictable ending of the happy ending. To break out of the idealistic bubble created by these fantasies, a strong shot of ugly reality is needed. The Effects of Gamma Rays on Man-in-the-Moon Marigolds provides a few hours in the darker side of life—the moments of melancholy usually avoided.

Gamma Rays is set in the Staten Island home of Beatrice, an unreasonably bitter widow, and her daughters, Tillie and Ruth. Tillie, played by Kendall Ray Munday, suffers the constant discouraging abuse from her mother (Zoanne Leffey) and sister Ruth (Amy Crumpacker) who is dear mommy’s mirror image.

Tillie is proficient in science, yet lacking in the social graces. To help her forward in a professional career, Ruth must assist her. The constant bickering and bashing between Tillie and Ruth is painful to witness. Tillie’s scientific aptitude eventually gains her reward and recognition. But due to the situation, these props lend an air of authenticity.

Another first was achieved by Centerstage’s production of Little Women. Her portrayal of Beatrice in Gamma Rays is overly loud in places, yet successful. The acts broken down into ten scenes along with taped narration, were all competently executed. Costumes and props for this story could have been, and probably were, picked up at a Goodwill outlet. But due to the situation, these props lend an air of authenticity.

The first act was opened by the lighting and theme music; it depicts the science of radiation. The lighting is not well, with the technical side being most outstanding. Lighting and theme music, "I’m going to chemotherapy that bury compost machine" sets the scene for Beatrice (Zoanne Leffey, center) to Tillie (Kendall Ray Munday, left) as Ruth (Amy Crumpacker).

A common practice in the entertainment industry is the consistent, predictable ending of the happy ending. To break out of the idealistic bubble created by these fantasies, a strong shot of ugly reality is needed. The Effects of Gamma Rays on Man-in-the-Moon Marigolds provides a few hours in the darker side of life—the moments of melancholy usually avoided.

Theatrical Production... "Marigolds" makes for melancholy

by Lynne Luthi

Pacific Lively Arts brings the enchanting Carnival to the Highline High Auditorium February 19-21 and 26-28.

Carnival is the story of Lilly, a small orphan girl who lives to be in the carnival. Unsuccessful at other pursuits, she is able to reveal her true talent, singing, only with puppets which she believes are real. Lilly becomes a saint in the rivalry between the puppeteer Paul and Marco, the magician. Because of his shyness, Paul also resorts to puppets, using them to express his love for Lilly.

Paul or Marco? Only her puppeteer knows for sure.
by Will Hartley

They bill it as having "the mystery of The Birds, the danger of Psycho, the evil of The Omen and the terror of Jaws." With the names of a few old baggies behind it, a film has got to be a winner, right?

But nobody remembers these four films for having the qualities of mystery, danger, evil or terror. They're remembered for their suspense. Unfortunately, Venom won't be remembered for that either.

"The ultimate in suspense" does such a bad job at building suspense, it's wonder that the promoters aren't locked up on a false advertising charge. The audience does jump (twice), it's based on violent sight and loud noise. There is no tension, just poorly used suspense cliches, such as a view from the eyes of the snake as she slithers endlessly through dimly lit heating ducts.

The story is more of a type of slapping tale than a horrifying monster thriller. Philip Hopkins (Iance Holcomb) is a sickly rich kid who's pegged far kidnapping plans foiled, the abductors kill a police officer and hole up in the house, with the mamba. George Holcomb (left) watches as a terrified Susan George is held by Klaus Kinski after she was bitten by a black mamba — the deadliest snake in the world.

Kidnapping plans failed, the abductors kill a police officer and hole up in the house, with the mamba. George is the snake's first victim. Reed and Kinski also suffer from the snake's bad disposition. In reality, the snake becomes the hero of the film by killing off the crooks. If it wasn't for the human revolution for snakes, it would be a shame to watch her get her scaly head shot off in the end.

Saturday ceramics

Ceramic prof to expound on particular techniques

by Jeff Keenan

The Ceramic Department will be hosting a lecture and ceramic technique workshop on Feb. 13 at noon in the Artist-Lecture Center (Bldg. 7).

Fairbanks, noted professor of art at Central Washington University for over 20 years, will present slides of his "Ceramics builds confidence. It's an endeavor. You can do as much with clay, you can make things to look at and things to use. "Ceramics builds confidence. It's a thing you can do as much with clay, you can make things to look at and things to use." The lecture/workshop is open to all interested students, faculty, and members of the community.

T-birds edge Everett by one; record now 19-2

by Jeffery R. Johnson

Last weekend the T-birds showed the difference between being very good and being great.

Coach Harrison and the T-birds extended their lead by beating Everett 73 to 72. The game was a physical one with Everett taking an 11 to 4 lead early into the game. It looked as if Everett was going to blow the T-birds out of Everett. The T-birds called time-out with 9:45 left to play in the first half. After the time out they came back playing tough defense and smart offense hitting the open men for easy baskets.

And Everett inbound pass got away from them, another turnover caused by good defense from the T-birds.

With only four seconds left in the half, Everett got the ball and went the length of the court hitting the basket to tie the game at 36.

The second half started off with Everett losing the inbound pass to Highline. The T-birds scored a basket to take the lead.

With Everett's big man in foul trouble, Highline began sagging to the middle getting another easy basket, building their lead to four.

Both teams were playing good defense and board control allowing only one shot apiece.

The beginning of the second half, Bellevue made a strong surge running off eight straight points, cutting the lead to 15. Using their fast break and some good inside shooting, they were making a go at the T-birds, using every advantage they could.

The T-birds called time out with 7:34 left to play in the game. To slow the tempo of the game, after the time out, the hoo

esters went back to playing man on man defense to concentrate on good defense, allowing Bellevue only one shot. Again the T-birds forced Bellevue out of their game plan by rebuiding their lead to 25 points.

The T-birds started pouring in baskets.

Orphan, who began to coach again this year, explained why he initially quit coaching.

"I've been coaching since 1946 and I quit at the end of the 77-78 season—that's 32 years of coaching. Basically I just got tired of it. We were in the water five to five-and-a-half hours a day and there just wasn't time for anything else. I think after that long coaching a sport, no matter what sport, you need a break — time to regain your enthusiasm."

After Orphan quit, the administration hired another coach, but it just didn't work out.

"The program last year had four women and four men turn out. They were scheduled for ten meets, but only made one. The athletic director was considering closing the swimming program," said Orphan. When the administration asked Orphan to begin coaching again, he said "Yes."

"I said yes to give the kids who were competitive a chance to participate in college athletics."

There have been a few changes made in the swimming program now, though.

This season started out with 31 swimmers.

The team has to score and force a turnover. Highline got the ball and went the length of the court and scored, leaving 11 seconds to play. Still trailing by one Everett got the ball, but a tough T-bird defense forced Everett to throw the ball away. Highline had a chance to win with 11 seconds remaining on the clock.

The hoo

esters took the inbound pass and went the length of the floor and scored, leaving only three seconds to play in the game.

Everett got the ball, but time ran out making Highline's winner by one.

On Jan. 23 the T-birds saw action at the Pavilion against the Helmsmen from Bellevue.

The T-birds portraying various basketball, scoring four points, high on selection and board control. Bellevue was caught out of position most of the night due to the good "D," and that enabled the T-birds to use their fast outlet pass for easy baskets.

Bellevue tried very hard to get back into the game before things got completely out of hand, but the T-birds didn't give up very much on either end of the floor. They showed Bellevue.

The T-birds took a 20 point lead to the locker room with them, with the first half "ding Highline 49, Bellevue 23."

"We've cut it down quite a bit. Now we're in the water about an hour and 30 minutes. Before we had a lot of quantity, now we go for high quality. The team members really like it. Most of them work, plus with their school work, it's really better like this: 'short and sweet'."

Since 1970 he has been a legal expert witness in the field of aquatic science, and has been involved in cases across the country. These cases usually involve large sums of money.

"I went to court in San Diego on a case involving $4.3 million to give you an idea," said Orphan. His schedule is as busy as ever, but it seems that Orphan hasn't lost his touch for coaching during his absence. The swim team is doing well — Women 8-2, Men 7-1.

Losing? What's that? Winning streak at 17

by Mark Keaty

Life is like a basketball game. Sometimes you win, sometimes you lose.
The last time the Highline's women's basketball team lost was on Dec. 14, 1981, against Wenatchee Valley. Since then the T-birds have run off 17 wins in a row. Their overall record is 19-1 and 60 in Region I.

Highline hit the road to take on the Everett College Trojans, on Jan. 30.
The Thunderbirds flew out of the gate early against the Trojans and never looked back, taking the victory 90-31.
The T-birds have run off 17 wins in a row.

Basketball team lost was on Dec. 14, 1981.

Point lead and enlarged that led to 13 T-birds have run off 17 wins in a row.

Bounding took control of the game in the Region I.

Scoreless for over three minutes. During second half. The T-birds held the Trojans Everett College Trojans, on Jan.

Mteearly again the T-man and never looked back, taking the victory.

Julie January tossed in 17 points. The T-birds trounced Pacific Trails with 12 points. Trish Armstrong, January, Karri Rocco and Gayle Peters added 10 points each.
The Thunderbird women traveled to Mt. Vernon to face the Skagit Valley Cardinals on Jan. 20.

Led once again by Jan Armstrong's 17 points and eight rebounds, Highline held on for a 79-69 victory.
The T-birds took an early advantage in the first half. The Cardinals scratched their way back to within three points, with 2:30 left in the first half. Highline increased its lead to six points at halftime, 40-34.

"They held their composure out there, I was pleased with that," said Bolinger.

"We came right back at them.

Armstrong's cohorts Boreland and Trish Armstrong each finished with 12 points apiece.

Highline's next two home games are against Shoreline on Feb. 10 and Skagit Valley on Feb. 13.

Former player returns as coach

by Jeff Andrews

In 1975 Mary Schutten was the number one singles player for Highline's tennis team.

That year the Highline women had successfully won their sixth consecutive Western Regionals, and the Women's Intercollegiate Sport Association Tennis Championships.

Highline's number one singles player 7 years ago, is now returning, as Mary Schutten-Cattel, head coach.

Schutten-Cattel played at Highline for one year before finishing her college career at the University of Washington.

In both of her last two years she was named the top women's collegiate player in the Northwest. After college she played on the Avon futures professional circuit.

Schutten-Cattel is looking forward to the season.

"I've always wanted to coach," she said. "I see a few things this year three to five players who are ready to play but not anymore, my goals have strengthened.

The prospects for this team look good according to Schutten-Cattel. Only two players are returning from last year's team, but she feels that they all play like they want to be number one.

"We've got lots at talent, but it all depends on how hard they want to win, and that's my job, to motivate them.

To motivate her players Schutten-Cattel tries to impress upon them that the opponents are human too.

"The secret is to be confident," added. "You're going to be scared, but if you look confident your opponent will be scared."

Schutten-Cattel's goal for the team is to build the women's tennis program, and bring the championships back, that were successful won their sixth consecutive.

One year before finishing her collegiate "We've got lots of talent. But it all does well this year, because they are virtually unknown variables to everyone else.

Splash! HCC wins two out of three at home

Highline's swimmers splashed themselves with two victories and one defeat in their only home meets of the season.
The T-birds aquatic team outswam the teams from Portland Community College and Evergreen State College.

Lewis and Clark, which has swam its way to and NAIA ranking of ninth in the nation, is the only team to beat Highline at home.

On Jan. 20, the Thunderbird swimmers drowned Evergreen with a score of 185-31.

Vicki Chovil led the women with first place finishes in three events, the 50-yard breast stroke, the 100-yard freestyle and the 500-yard freestyle. Chovil swam the 50-yard breast stroke in a time of 36.21 seconds. In the 100-yard fly she was checked at 1:03.28. She stroked to a 55.72 timing in the 500-yard freestyle.

For the men, Dave Sampson finished on top in three events. He swept past the rest of the field in the 50-yard breast stroke, the 100-yard fly, and 100-yard breast stroke.

Mark Korvas outstayed his opponents in two events. In the 200-yard individual medley, Korvas covered the distance in 2:16.14, while in the 100-yard breast stroke, he finished at a 1:32.99 pace.

Highly ranked Lewis and Clark made a big splash as they defeated the T-bird aquatic team by a 126-84 margin.

Chovil earned a pair of victories in the 200-yard freestyle and 200-yard breast stroke events.

For the men, Sampson was on top in two events, the 50- and 100-yard freestyle. Sampson's times were 23.22 seconds for the 50-yard race, and 1:01.08 for the other event.

On the Jan. 22, the T-birds swimmers defeated Portland Community College, by a 77-35 score.

Highline will next Evergreen State and Linfield College once again on Feb. 6 at Evergreen. The state small college championships are to be held on Feb. 20 at Evergreen, and the nationals are on March 4, 5 and 6.
