Mango Pham

Graduate stepped out of comfort zone
Found confidence, gained an award, and a nickname

By ALISA GRAMANN  Staff Reporter

Mango Pham has mastered the art of fitting in while still standing out. Over the course of her two years at Highline, Tran “Mango” Pham has learned to live independently and to interact with people from diverse backgrounds.

Pham spent her first 17 years at home in Vietnam before moving to Michigan through an exchange student program, where she spent her senior year attending high school and living with a host family. Pham said her initial goal after high school was to attend Grand Valley State University in Michigan, but she didn’t get accepted. Pham had to do research for alternative schools, and her search led her to Highline.

“Highline accepts everybody,” she said. Pham said that coming to the U.S. posed some challenges. “[The] Language barrier, that was the biggest one,” she said. Pham said that in Michigan, everyone she saw was white, which made her feel very out of place. However, the host family she stayed with helped her to feel more at home.

Pham said that working for Unilever has always been a dream of hers, since her father worked there when she was young. Unilever has always been a household care products company which manufactures a large variety of products ranging from food to toiletries to clothing, and traveling the world. Pham said that her dream job is to work for Unilever, a global company which manufactures a large variety of products ranging from food to toiletries to household care products.

Pham’s nickname “Mango” has stuck with her since middle school, where she said she feels more independent. “They engaged me in family activities,” she said. Pham’s nickname “Mango” also helped her feel more at home with her host family, she said. In Michigan, the family she lived with all had names that began with “M.” Her nickname “Mango” has stuck with her since middle school, where she said she feels more independent.

“Now I know that I can do a lot of stuff,” Pham said. Pham said that, in addition to learning to be confident in herself and her abilities, part of her “stepping out” was keeping an open mind about new ideas and also learning to live on her own.

Pham has been living in the U.S. for three years — with two of them being in Washington to attend Highline. She said that it has been two years since she has been able to visit Vietnam.

Pham has been living in the U.S. for three years — with two of them being in Washington to attend Highline. She said that it has been two years since she has been able to visit Vietnam.

When she first came to the U.S., she said that she was very homesick, and had trouble making friends. “I didn’t have any friends at all,” she said. “I looked like an alien there.”

Pham said that in Michigan, everyone she saw was white, which made her feel very out of place. However, the host family she stayed with helped her to feel more at home.

Pham said that working for Unilever has always been a dream of hers, since her father worked there when she was young. “It’s something I looked up to when I was young,” she said. “I think that Unilever is cool.”

Pham plans to graduate this spring with an Associate of Arts in communication studies. Then she will transfer to Grand Valley State, where she has won an International Merit Scholarship, and pursue a degree in business communications.

Pham said that she was shy and felt very lost at first. Pham said that another challenge was gaining self-confidence. “I have had to step out of my comfort zone,” she said. When she got involved with Student Programs as a community leadership consultant, she was introduced to many people with diverse backgrounds.

This helped her to get used to interacting with people from all over the world, each with a different history. With a goal of being a business communications major and communicating on a global level in the future, this experience has been irreplaceable, she said.

Pham said that, in addition to learning to be confident in herself and her abilities, part of her “stepping out” was keeping an open mind about new ideas and also learning to live on her own.

A tale of art, love, and success

Highline alum Linda Yoshida honored for her achievements

By ELENA FLOYD
Staff Reporter

Highline will honor philanthropist, acclaimed author, and businesswoman Linda Yoshida as the 2011 Distinguished Alumni.

Each year the Distinguished Alumni Award recognizes Highline graduates who have excelled in professional achievement, leadership, and service to the community.

Yoshida graduated from Highline in 1974 with an Associate of Arts degree with a literature and business administration emphasis. After Highline, she took various classes at Portland State University.

While at Highline she focused on improving her skills in business administration to become a legal secretary, but soon found a love of the arts, especially literature, on campus.

Her short stories gained much praise from her instructors as well as fellow students, which made her contemplate writing for the local paper. Instead, her life journey carried her to a position as the director of a fine art gallery where she assisted in advancing the careers of many visual artists.

A tale of art, love, and success is being recognized for her work in philanthropy, writing, and business.

Students hope to find summer work

Staff Reporters

It’s not too late to get a summer job, as multiple employers are still seeking hard working individuals to work both full and part time.

Meanwhile, many Highline students say they hope to accumulate as many hours at work as possible this summer.

Some students who are already employed look to increase hours during the summer.

“My managers like me, so hopefully they will be bumping up my hours,” said student Wendy Nichols.

“I’ve already got a job for summer. Sixty hours a week isn’t too bad,” said Sunny Gakhal.

Other students haven’t been as lucky finding summer work.

“It’s hard trying to find a job right now, I’ve volunteered during the summer but I would rather find a job where I can...

Summer sun will bring smoggy skies, experts say

By AMOS NISTRIAN
Staff Reporter

State officials are encouraging the community to limit their driving in an effort to prevent summertime smog.

Toxins that are currently present in the airways will develop into smog as the temperature begins to increase, putting polluted, cloudy skies in the summer forecast, experts say.

Air pollution is caused by factors such as burning wood to heat homes, burning coal and oil, and especially because of emissions from industry and motor vehicles.

“The staggering number of vehicles on the roads around the Puget Sound region consistently creates an equally staggering amount of air pollution,” said Richard Wisti, communications specialist for the Puget Sound Clean Air Agency. “The difference in the summer is sunlight and high temperatures cook air pollution into smog.”

Pollutants currently present in the air include sulfur dioxide, lead, nitrogen dioxide, and carbon monoxide, which can potentially cause major health problems.

In 2009, a State Department of Ecology study concluded that pollution from fine particles, which are commonly found in smoke and diesel emissions, contributes to about 1,100 deaths in Washington each year, as well as about $190 million in added health care costs.

The quality of the air is impacted by differing factors from season to season.

In the winter, smoke from wood-burning fireplaces becomes a major issue, and with summer comes the risk of wildfire smoke, as well as ozone, which is formed when reactive organic gases and nitrogen oxides react with sunlight.

“Around the state, fire districts and agencies like the Forest Service and the Washington
Men’s soccer brings back most of team after playoff run ends a game shy

By RICHARD MEIER
Staff Reporter

The Thunderbirds men’s soccer team is looking to reload after failing short in the title game last season.

After clinching the last playoff spot, six were sophomores, setting the expectations high as the team assumes to return more than 20 players from last year.

“I expect us to be better,” Head Coach Jason Prenovost said. “We have a number of exciting players returning next season. Highline rallied off five straight victories to meet Peninsula in the championship game. After regulation and overtime, the Thunderbirds took a 1-0 lead into extra time and fell a game shy of a national title.”

After falling short of the title last season, Prenovost has placed additional efforts on off-season recruiting efforts.

“I’m out in the soccer community every day. The key to success in any venture is hard work,” he said.

“If you want to lead a successful program you need to make sure you surround yourself with good people. I work hard to make sure that every year whether on paper we need them or not, we bring more good people into the program.”

Prenovost’s hard work has paid off as he brings in a very talented recruiting class.

“Darwin Jones will be playing for us next year and is one of the best goal scorers in the region. We picked up two boys, Luke Broz and Dominic Torres, from Idaho’s state champion team and I expect them both to compete for starting spots,” he said.

In addition to Jones, Broz, and Torres, the Thunderbirds also added SPSL 3A co-offensive MVPs, Auburn Mountainview’s Max and Fonney Lake’s Jordan Billy.

The Thunderbirds also add Riley Dewing of Auburn, Briton Jolley of Tahoma, Jonathan Betancourt of Hazen, and Auburn Riverside’s Tanner Fairweather, who are expected to compete for starting spots, Prenovost said.

Prenovost understands that expectations are high for next season and he and his team will have to be ready for the challenge, he said.

“Our goal is always to win a NWAACC Championship. We try to create a competitive environment where players work hard, are not afraid to challenge themselves and get better every week,” he said.

“By being accountable to these principles and holding the players to high standards, we will have a shot at accomplishing our goal.”

Wrestling faces rebuilding year with three All-Americans leaving Highline

By RICHARD MEIER
Staff Reporter

After a 10th-place finish at the NCAAA National Wrestling Championships, Highline Wrestling Coach Scott Norton faces the challenge of replacing three of his four All-Americans.

While Highline’s losing all but one of its All-Americans, it does return 125-pounder Steven Romero, who is favored to win a national title next year, Norton said.

Highline is losing Grey because he’s no longer eligible at the junior college level. He was originally considering redshirting and working out with the team next season, but now considering transferring to Montana pending a review of his transcript.

In addition to the departure of Grey, Highline is also losing All-American Andrew Bland who is transferring to Wheaton College, and is facing the possibility of losing fellow All-American Jason Gray who may be transferring due to eligibility discrepancies.

With the departures of so many key wrestlers Highline is faced with the harsh reality that next season will be a much tougher season than last year, Norton said.

“We are definitely looking at the possibility of a rebuilding year,” he said. “We’re looking at kids who don’t have replacement guys, but kids who we can develop over the year. We’re definitely looking at a brand new team.”

The team’s recruiting class is headlined by Dickinson State transfer Micah Morrill at 157 pounds; 175-pounder, Lucas Huyber of Auburn Mountainview; 175-pounder, James Souza of Emerald Ridge; 215-pounder, Anthony Whiteman of North Central in Spokane; and Graham-Kapowsin’s 285-pounder, Michael Henry.

Morrill is the likely successor to two-time All-American Jason Gray at 149 pounds, and Souza was part of a select pool of Washington high school wrestlers selected to wrestle against a lot of different schools, but if we got them, they could realistically make a big impact.”

While Norton is happy with his incoming class and his returning athletes, there’s no denying that next year will be a development project, he said.

“We do have a decent class coming in, we’re going to have a lot of depth at the lower weight classes which will definitely give kids challenges,” Norton said.

“Everyone’s looking to be the next big thing and that’s not going to happen overnight. We’re going to take good kids over the year turn them into a contender for next year.”

To prepare his wrestlers for next season as well as raise money and familiarize local wrestlers with the Highline program, Norton has two events planned this summer.

“Starting June 4 we’re starting a wrestling club that will run every Tuesday and Thursday from 5:30 to 7 p.m. throughout the year. It will be a great way for wrestlers to stay in shape and to bring in local talent,” he said.

“One of the coaches from Oregon State is coming up here for a two-day wrestling clinic/fundraiser from July 8-9, with all proceeds coming back to Highline.”

Jerome Bland’s rough past drives him to succeed

By MICHAEL L. DONALD JR
Staff Reporter

Jerome Bland used his family, basketball and college to escape the harsh circumstances of a Chicago gang life to embark on a future of helping others.

“If it wasn’t for my momma and my uncle, I would probably be dead or in jail,” said Bland.

Bland is a 6’1” guard who played last season for the T-Birds.

Bland grew up in the south side of Chicago and was exposed to organized gangs as a child.

The south side is controlled by these organized gangs called nations.

These nations controlled their neighborhoods with extortion, narco-trafficking.

The gangs normally controlled houses with thousands of official and unofficial members.

Life in a concentrated area of a major metropolis like Chicago could be deadly.

“If it wasn’t for my momma sending me out of Chicago, my life would be different. I know better than some of my home boys about the importance of a good education,” Bland said.

“I have hope dreams of reaching the league [NBA]. I know that I might not make it, but I do have a good education.”

“I will return back home and work with a personal trainer. I have a lot to work on because the competition is going to be on a higher level,” he said.

Playing for Highline, Bland has been working with a deep and talented bench, so working within the scheme of Head Coach Che Dawson’s team design limited his potential to become more visible.

That hasn’t stopped his climb to the next level.

“I understand what the coach did this season and I remained disciplined to the system. Now I am going to take my talent to a four year school. I really appreciate the opportunity that Highline offered me to play basketball and get a good education. This team is good. I hope that next year that they go further than we did last season,” said Bland.

Bland wants to finish his education by obtaining a degree in social work.

“I want to go back home to Chicago and help those who are worse off than me and open up mentoring programs and help people stay away from gangs,” Bland said.

Politics makes outsider Afichuk into an insider

By JOSHUA HART
Staff Reporter

Olga Afichuk took control of her education by becoming student president and vice president in three short years.

She will be graduating and receiving her associate of science degree from Highline in biology this quarter.

She plans to take that degree to a university to work toward a bachelor’s degree in biology as a pre-med student.

Afichuk said she will either transfer to Seattle University or Western Washington University. She will make her decision after she has received all the notifications from the colleges to which she applied.

Afichuk came to Highline as a Running Start student three years ago not knowing what lay ahead for her in her time at Highline.

Since then she has been the vice president and president of Student Government.

Afichuk became the vice president as a running start student in her second year of attending Highline.

Coming to Highline was due in large part to what her mother said to her.

“My mom told me that education was the only way to come out of poverty,” Afichuk said.

Afichuk spent 10 years in Moldova before coming to America.

“My mom told me that education was the only way to come out of poverty,” Afichuk said.

Afichuk gained the trust of students on her way to becoming the vice president of student government.

This sparked other students to get involved, Afichuk said.

She said that people need to take control of their education and that they have a lot of choice in how their school is run if they take advantage of it.

She used the trust she gained as vice president and the relationships she made with the students at Highline to become president of student government last year.

Afichuk’s goal as president was to give students more knowledge about what their rights are in school and society.

She felt like not enough people knew their rights as students and that was part of the reason people did poorly in school.

As student president, she wanted to assist students with their troubles in class since she could relate to that, having gone through and conquered the same struggles of the students throughout her education.

Afichuk said she eventually would like to have her own practice as a family physician.

She said that Highline was a good stepping stone to get there.

She said that Highline was transformational for her and she is now a completely different person leaving Highline then when she first came here.

Afichuk said she is more aware of cultural differences in society as a human rights advocate and has learned to open her eyes to the variety of cultures around her through the diversity at Highline.

She said she is sad to be leaving Highline, but ready for the next challenge.

“It’s been my home away from home in a way,” Afichuk said. “I’m excited to take the next step.”
For All-American Highline wrestler and soon to be graduate Darren Faber, discipline is the key to everything.

“Discipline is the vessel. It includes hard work to come to practice, or to do homework. It includes being focused on what you’re going to do and how you’re going to get better,” Faber said.

“But, you have to have a willingness to work or you’re never going to get anywhere. Your mind has to say you’re going to do this if you’re going to be successful with what you’re doing.”

Yet, Faber didn’t always have an enthusiasm for learning. Before Highline, Faber was an immature teenager who now has the focus he lacked. “I didn’t have direction before Highline, I just floated through life, I thought I knew everything and learning was a chore,” he said.

After taking the step to enter Highline’s Running Start Program and competing for two years as a member of Highline’s wrestling team, Faber’s attitude changed and his vision for his future began to take focus.

“At Highline I learned what’s valuable, I learned how to learn. I learned that you don’t just learn by sitting in a classroom, but you learn by engaging yourself in it and caring,” he said. “I grew up here, I did Running Start here, I learned how to manage my time here, and I learned the discipline to work harder than I would have in high school. What I’ve done and learned here is extremely valuable.”

For Faber, Highline isn’t just a school and the instructors are no longer mere instructors.

“Highline is so diverse, there are people from every walk of life and you can sit there and talk to them about anything. There are so many people here with a broad sense of things, and they have the same needs and wants,” he said. “There are professors who are more than just a professor, they are now my friends. People I’ve asked advice for, who I’ve debated and argued with, or just went to talk to.”

While Faber gained a wealth of knowledge from Highline professors, the wisdom and values gained from Wrestling Coach Scott Norton provided Faber with the discipline needed to excel in the classroom.

“I’ve gotten better as a wrestler and a person because of Norton, he’s awesome. He’s a great example of what hard work can do, you have a 40-year-old guy who runs circles around guys, working harder than the people competing in the room. The jump from high school to college wrestling is huge and he definitely helped with that,” Faber said. “A lot of what I’ve learned here is from Norton.

Discipline and hard work to constantly push yourself harder and harder, to do better on specific skills, and to learn by engaging yourself in it and caring. It always comes down to discipline. The respect between Faber and Norton is mutual.

“I can’t say enough about him [Faber], he’s a great example of a person on that mat he’s a fierce competitor and off the mat he’s one of the nicest kids I’ve ever coached. He’s great at putting things into perspective, he’s a kid with great grades, he’s an optimal student, and a great competitor,” said Norton.

“He’s a great kid. Whoever gets him will be lucky.”

Under the guidance of Coach Norton, Faber finished his collegiate career at Highline with a fourth-place finish and All-American honors at the NJCAA National Wrestling Championshps, contending for a national title at 197 pounds.

Next year, Faber plans on continuing his education at Wheaton College in Illinois.

While he isn’t 100 percent certain about his plans, he has narrowed it down to two paths that would suit him well, he said.

“I want to get my bachelor’s in philosophy and then see how I feel. If I feel up to it I’ll get my masters and teach philosophy at a university or something,” he said. “If I don’t do that I think I’d like to become a pastor.”

Even though he’s still years from discovering his ultimate future, the All-American found the tools necessary to bring the vision into focus at Highline.

“The pursuit of learning for the sake of learning, or knowing the truth. I need to not have that, I didn’t know it existed. I found my passion here,” Faber said.

Faber’s passion now is a curiosity to learn and to understand the world better, he said. From the wisdom he’s gained to this point and from the wisdom he’s yet to have gained, he wants to use his knowledge and passion to help others, he said.

“As a little kid I wanted to be a brain surgeon because my grandma died of cancer, I didn’t want people to go through the same thing that she went through. I wanted to help people,” he said. “But, you have to have a discipline to work harder and harder, to do better on specific skills, and to learn by engaging yourself in it and caring. It always comes down to discipline.”

While philosophy was the undecided passion discovered at Highline, Faber’s true passion, the basis for all his successes to this point, is his passion for the Lord.

And while the transition from All-American wrestler to ministry may be complete to some, Faber said there is a strong correlation between the two.

“Don’t see them as being very different. You have to be disciplined. In life, they say it’s impossible to be perfect, I’d agree with that, it’s impossible to be a perfect wrestler,” he said. “The pastor thing comes in here because the only way to be perfect is to rely on God. I can try as hard as I want, but I need help to do that. I can’t do it on my own. I know I’m going to fail, but the goal is still be perfect and I have to rely on someone else to get me there. That’s how it connects.”

While he still has several more challenges to face in his lifetime, Highline will forever remain in his heart as the place that molded him into the man that he now is.

“The skills I’ve learned and the friends I’ve made at Highline is something that I’ll carry with me forever,” he said.
International man of mystery enjoys foreign affairs

By VICTORIA DOM
Staff Reporter

In a college thriving with culture, Alex Birch is the unexpected face of diversity.

Studying international business, Birch utilizes his affinity for the world, as he is the only American in the International Leadership Student Council.

“I already know what Americans are like,” Birch said. “I wanted to get out of the little bubble and open my eyes to a taste of change.”

Involvement with the International Leadership Student Council gave him the opportunity to discover everything that the world has to offer.

“It’s not for some people, but it shows a different perspective on people as a whole, and the world as a whole,” he said. “The uniqueness of it – that is what fueled me the most.”

In addition to the International Leadership Council, Birch has also been involved with Student Programs, the Highline Volunteer Association, the Cultural Exchange Club, and is multilingual in Spanish, German, and Chinese.

“It’s amazing how different people can be from around the world. We are all so different but so alike,” he said. “It’s fun to hear how people outside the United States think.”

Birch’s global fascination stems from his father’s business adventures as a senior engineer for The Boeing Company.

“My father traveled a lot helping airlines, and when he would tell me his stories I got hooked,” he said. “I’m shooting for his path, but with a business aspect.”

Upon graduating from Todd Beamer High School in 2009, the Federal Way native was faced with a difficult decision on how to continue his educational path.

“I didn’t know whether to go to a community college or go straight to the University of Washington,” Birch said. “I had been thinking about the UW for a long time, and I don’t know what pushed me to decide to go here.”

Though, if given the opportunity to start over, Birch says he would come back to Highline without hesitation.

“This was one of the largest stepping stones in my life that helped me from getting lost, and it definitely helped me choose what I want to do,” he said.

Birch is transferring to the University of Washington, where he plans to earn a bachelor’s degree.

As for further education plans, he is considering moving forward to obtain a master of business administration degree.

“My dream job would be to be the CEO of a large company; the creator of some fantastic thing that revolutionizes the world,” he said.

Using his experiences with students from diverse cultural backgrounds, Birch is on the path to becoming an international, jet-setting businessman.

“It’s something about the limitless possibility of being able to travel anywhere around the world,” he said. “I want to be able to pick a location on the globe and fly there first class.

“A lot of people go to a good school, good college, get married, have kids, and die. I don’t want to do that,” Birch said. “Life is too short to be normal, I think.”

Introducing WGU Washington

Washington’s only state-endorsed, all-online, nonprofit university

Special benefits for Highline Community College grads:

- Application fee waiver (a $65 savings)
- 5% tuition discount
- A chance to apply for a $2,000 scholarship

WGU Washington is a great fit for you:

- Nonprofit and affordable
- Online and flexible
- Generous transfer privileges

Accredited bachelor’s degrees offered in Business, Education, Information Technology, and Health Professions (including Nursing)

Marcus Bailey likely be older than some of his professors too.

Bailey graduated from the University of Washington class of ’74 but has recently returned to college to fine tune his education at Highline.

“I’ll be turning ‘65 soon and I needed to upgrade certain skills,” Bailey said. I was doing consultant work and the bottom fell out.”

“I am a Vietnam veteran. When I first came home from the war I really didn’t like or appreciate how we vets were received. My first time in college was intense,” he said.

“At first I was upset at the people with the long hair, the hippies. Their outlook and treatment of the vets were horrid. As I became more aware of the circumstances of the war, I became an anti war advocate. I associated myself with the Black Panther Party and protested against the unequal treatment of people of the world and tried to do my best to make things better for women and minorities,” Bailey said.

In the Air Force, Bailey was bound by orders but once he was discharged he was able to express his feeling on the war in Vietnam as well as the other issues that dealt with the youth of the United States. The killing of five college students at Kent State kept tension high among the people, especially young men and women at the University of Washington at the time.

“The difference is that nowadays there isn’t very much testing on the social equality issues that the students had to deal with in the ‘60s and ‘70s. Highline shows that. Some of the same issues maybe still relevant today, but hey, now we have a black president, and that in itself shows growth that we couldn’t have possibly believed would be possible for at least another hundred years. When I was at the ‘dub back in the day, we would have laughed at anyone who said that was possible,” Bailey said.

“Maurice is a worldly man and if I had one word to describe hit it would be, complicated. He is not a man to be under estimated. That statement is not to be taken in a threatening way. What I mean is that he has been around the world and seen a lot of thing and not to be taken for granted. He is a very wise man who should not be stereotyped,” said accounting professor Anthony Newton.

He said that he is happy to be a part of the Highline graduating class and appreciate the sacrifices and contributions to humanity he has made to encourage diversity to be the way it is nowadays.

“Before I actually decided on what college I wanted to attend I looked around. I could have gone to Seattle Central or a number of other colleges in the general vicinity because I live in the downtown area. I chose Highline because of its rich diversity,” Bailey said.

“Highline has a true college setting that I am used to. The other colleges were like high schools,” he said.

His goal was to brush entrepreneurial skills and to keep up with changes in business technology.

“I needed to upgrade by skills with advanced Excel, the latest accounting software, Quickbooks and earn by AAS,” Bailey said.

Long road to Highline may now lead to medicine

When Joy Mukiri moved to the United States from Kenya just over two years ago, she didn’t know if higher education was going to be in her future. Life in Kenya wasn’t easy on her or her family. Clashing tribes made their safety the prime concern for Mukiri’s mother, who was single-handedly raising Joy and her four sisters.

In a difficult decision, Mukiri’s mother left her children and their home in Nairobi to move to the United States to find work and create a life for their family where they had a greater guarantee for safety and security. That was 11 years ago, and now Mukiri is the last of her sisters to move on to the university level, graduating with her associate’s degree.

Being the youngest of five girls in her family, she was never sure if she would find a way to fund her schooling once she moved here or come as far as she has, but thanks to the Act 6 Leadership Scholarship, she will be able to.

Mukiri is one of 48 recipients of the Act 6 Leadership Scholarship, a full-ride leadership scholarship to Whitworth University, Pacific Lutheran University, Northwest University, Trinity Lutheran College, Gonzaga University or Heritage University. It is the only full-ride, merit-based leadership scholarship offered in the Northwest.

“Having the scholarship and knowing I have four years paid,” she said. “I can go to school, get good grades, and do my thing because people saw something in me.”

“I came from Kenya, I came from a single mother with four other girls, from not a rich family whatsoever,” Mukiri added.

“My sisters didn’t know if they would go to school or not, and being the youngest I didn’t know. You always have that goal that it’s going to turn out okay but you never really know how.”

While at Northwest University, Mukiri is going to be working toward a bachelor of science degree in biology.

Having a degree in biology is the first step toward her dream of one day becoming a doctor, she said.

She is still unsure which area of medicine she wants to go in, but is enjoying the journey she is on.

“Right now I’m looking [at what area I want to go in to],” she said.

“I was thinking about going into pediatrics or cardiology, because I’m getting fascinated with the heart and all that stuff. I really don’t know yet, though. I want to dig more and go deeper into biology so that I can know where I fit.”

Transitioning to life in the United States had its ups and downs for Mukiri.

Going through what her family did in Kenya got them to where they are today, she said. “I have a sister in the UK, another one in Switzerland, two sisters here [Grace and Florence] and my nephew,” Mukiri said. “I would say it’s worth it. It all happened for a reason. I don’t think I would take anything back.”
All business, but with a purpose and a heart

By RASCHELLE CASEBER
Staff Reporter

With a passion for business driving his career decisions, Vince Dominguez chose Highline to pursue his goals.

Dominguez has attended Highline for two years and currently works as the vice president of Student Government.

His interest for business started in high school. “In high school I used to be a member of a business organization called DECA that focuses on developing future leaders for business and marketing throughout all of high school,” he said.

DECA provides opportunities for students to compete in various events. “From these types of experiences I came to be passionate about the creativity, professionalism and competitiveness involved in business and it taught me to think critically about business ventures,” Dominguez said.

“In addition, I also saw business as having versatility in what types of opportunities could be opened up for me in my future,” he said.

When Dominguez is done with business, he hopes to go into teaching to hand down his knowledge to inspire students, he said. Initially Highline caught his eye because of the amount and variety of business courses that are offered. But the diversity on Highline’s campus was a major factor in his decision to attend.

“I wanted to be more intentional with my decision and I wanted to choose a school with a big reputation and diversity. So I chose Highline, especially because it is the No. 1 school for diversity in Washington,” said Dominguez.

His long commute from Lynwood every morning shows his dedication to Highline. “I’m willing to pass by other community colleges to come to this one because of the diversity, people and classes that are offered,” Dominguez said.

The diversity is something that he’ll miss when he moves to the East Coast, he said. “I have chosen Babson College in Massachusetts, the No. 1 college for entrepreneurship according to U.S. News,” he said.

He will continue with his business major as he moves on, but his emphasis will change. “The difference between Highline and Babson College is my business emphasis. Here my emphasis is accounting but there it will be entrepreneurship,” Dominguez said.

He hopes to utilize his business major to open a multicultural restaurant that will appeal to the masses. “For me, it [the restaurant] would be about more than profit. It would be about contributing and giving back to the community,” he said.

His experiences at Highline have taught him the importance of leadership programs and getting involved.

He recommends that students get involved on campus by voting for student government elections, get acquainted with the Student Legislative Action Committee, campus events and find clubs that match their passions.

He plans to continue supporting his passions of higher education and sustainability through his college and future career.
The women’s soccer team has playoff hopes again this coming fall season, especially with the combining of the incoming players and the remaining women from last year, Head Coach Tom Moore said.

The T-Birds have 11 new women who have committed to being on the roster next fall and five others who have yet to sign. Five of the players from last year will be returning to the squad to have another go at a NWACC championship, Coach Moore said.

Tom Moore and his assistant coach and goalkeeper trainer, Jake Potter, recruited the incoming freshmen from Los Angeles, California and Atlanta, Georgia.

His life could have easily turned out differently had he not made the decision to focus on his education and basketball. He chose to attend Highline College in the Kent area; Morgan Brown from White River High School; Chennelle Green fromTahoma High School; and Falyon Malloy from Kentridge High School. Lauren Johnson from Auburn Riverside High School will be a freshman and she plays in the defense.

- Kyla Kitts from Kentridge High School will be a freshman and will be playing goalkeeper. Shelby Hutton, Eastern Washington University, will be a red shirt freshman and she plays midfield.

The incoming sophomore midfielders include Jessica Sanchez from Quest University in Canada and Kelby Weiler from Seattle Christian.

Emma Gremer, Dani Streuli, Shelby Devol, Jamie Farris, and Michael Paulston are all returning and are ready to get back to the playoffs and are confident. In the past, the women’s team has had its ups and downs but has built up a solid reputation for being a tough team to beat. Last season the ladies went 7-7-4 on the season until the road to the championship was cut short after having a 3-1 lead over South Puget Sound Community College and a late time loss to Columbia Basin.

“Last season we lost in double over-time to Columbia Basin in the first round, but this year, I expect to go a lot deeper into the playoffs,” Moore said.

Even though they didn’t win a championship, making it to the playoffs is something to be proud of, but not enough for Coach Moore.

“I know the team is capable of winning a championship. Becoming a team and working together is what it is going to take,” Moore said.

The new recruits are welcomed into the women’s soccer team.

Kosi uses height inside

Kosi Ali is one of the players that Head Basketball Coach Che Dawson has high expectations for this upcoming season.

Ali is a 6’10” power forward who has passed. I told her I was going to be a great player and that I was going to be a great leader. I am walking in the right direction.

“My life could have easily been on another track,” said Ali. “I grew up in a gang-infested neighborhood where the ‘wrong’ crowd was the norm. Gangs and drug dealers were the role model for a lot of the youth in my hometown.

Ali had the talent to excel in basketball and used it to find a way out of the at-risk environment. She got involved with every neighborhood breeds at-risk environments, at-risk situations were around Ali.

I got to Ali and found out that the same stuff is going on there,” Ali said.

He has relatives who centered his focus though.

“The only thing that motivates me is my family. The biggest one was my grandmother, who has passed. I would be either on the field or in the basketball court. I grew up in a gang-infested neighborhood where the ‘wrong’ crowd was the norm. The only thing that motivates me is my family. The biggest one was my grandmother, who has passed. I would be either on the field or in the basketball court.

A2 campus life

Magallanes bids farewell to pursue education

By KATE ADAMS
Staff Reporter

Running Start Coordinator Josh Magallanes is leaving Highline and moving on to bigger and better things—a master’s degree from Seattle University.

It is at Seattle University that he will take part in a year-long internship with Seattle Counseling Services, where he will be able to grow himself in counseling and hone his craft.

With his master’s degree, he hopes to gain a tenured faculty position in a counseling department and open up a private practice.

"[Community college] is really where the heart beats," Magallanes said. "It is the core of human and community development.

He never thought he wanted to get an advanced degree but since being in the community college setting, he has proven to himself that higher education is where he belongs and he can accomplish great things.

He wants to be able to provide research, write articles, and develop new theory; the way to do that is to get those

Cultural Center.

There is not a specific topic for this event so feel free to bring poetry on any topic and share it, said Svetlana Slobodchikova.

Goats clean up campus

Goats and sheep will be used at the end of the quarter to help clear the overgrown brush around Highline’s retention ponds.

The goats will be brought in from June 6-8. Originally the date was set to be June 22-27.

Enjoy the musical talent of the Concert Chorale

The Spring Concert, hosted by Highline’s Music Department, will showcase American choral composers Stephen Foster, Gjerlo, Claussen, Hafso and Brunner.

Highline’s Concert Chorale will perform twice today at 12:15 p.m. and 7:30 p.m. in Building 7. The first concert is for students, faculty and staff.

The second is for community, family and friends. “Highline Concert Chorale is an ensemble of auditioned voices, including students seeking a college-level singing experience, faculty and staff,” said Dr. Sandra Glover.

"In this Spring Concert, smaller ensembles from within

the Chorale will be featured as well, singing special music enhancing the Americana theme," Glover said.

Learn handy tricks and useful advice for college

Jennifer Worick, author of The Worst Case Scenario Survival Handbook, will discuss dating, sex, college and advice to prevent students from being tricked.

Her presentation will be on Friday, June 3, at noon in Building 14, room 101.

Her book covers an array of topics from comical how-tos to serious counsel.

Watch UW film about mixed heritage and race

Learn about the University of Washington’s project “Inter-generational Roots: A Mixed-Heritage Families Oral History Project.”

The film is entitled “Beyond the Spell: A Media Project about Identity and Mixed Heritage.” It will be showing today at the University of Washington’s Ethnic Cultural Theater at 7 p.m. A second exhibit is scheduled for June 12 at 5:30 p.m. in the Benaroya Hall lobby before and after the University of Washington’s School of Social Work graduation ceremony.

Writing assignments

I’m confused.

Let’s talk.

We help create better writers not just better papers.

Des Moines Farmers Market returns with plenty

By RICHARD MEIER Staff Reporter

The Des Moines Farmers Market begins this Saturday at the Des Moines Marina.

Coming off its most successful year financially, the market enters its sixth season, and its second under the control of local volunteers.

The market has had a unique up-bringing as it has been run by local organizations, the city, and other non-profits, before a volunteer group formed last year with the sole purpose of producing a quality market for local residents.

The market is headed by president Wayne Corey and Washington State Farmers Market Association’s market manager of the year Rikki Marohl.

As a special treat, the market plans on acknowledging Marohl’s accolade this weekend, Corey said.

“During the June 4 opener we’re going to be having a tribute to her,” Corey said. “The mayor is going to be there with a proclamation, the WFMA will be there plus several community groups and local non-profits.”

Corey said that he expects a turnout of about 1,200 in attendance for opening day to browse the offering local vendors, lambs, bees, and pig. Fresh seafood vendors, and depending on what’s in season, we’ll have a variety of vegetables. However, there won’t be a lot of fruit yet.

Federal Way to try again on downtown development

By CHRISTINA GRAMLING Staff Reporter

FEDERAL WAY – The Federal Way City Council has gone back to the drawing board concerning the empty AMC Theater lot in downtown.

Last month Federal Way City Council members defined the building guidelines for potential developers and will begin accepting preliminary plans and building concepts from developers for the site.

The former movie theater site was purchased by the city in 2007 for $4.1 million in hopes of creating a town center and mixed-use area located at the intersection of South 316th Street and 208th Avenue South.

The city would also like the space to be business friendly and enhancing the economy.

The City Council’s ideal development would include commercial and residential space, including a community center.

The community center would have flower beds, mounded earth designs, fireplaces, fountains, and markets.

After three years and seven extensions, Twin Development, a developer previously chosen to build on the site, had to throw in the towel when it became apparent they would not be able to secure the financing necessary to develop the property.

Today the site is still empty and the City Council is at odds in regard to the height of the potential buildings. The previous plans were to build three high rise towers, ranging from 35 to 45 stories. This was against the wishes of some council members.

Council members Linda Kochmar and Roger Freeman were vocal about their opinion on the building height and voted against lifting the height limitations the first time around.

“The town is currently limited to 85-foot buildings and I’m afraid of another empty building,” Kochmar said.

“People want charm that invites passion and renaissance. I’m listening to the people this time, they want charm over height,” said Freeman.

City Councilman Jack Dovey said that it would be best to limit the developers and to let them decide what works for them.

“We have to be flexible and open,” Dovey said. “I don’t think it’s a wise direction to limit the specs [height] like that.”

The city isn’t going to develop the project by itself. It’s not good to limit the parameters,” said Councilman Mike Park.

Park said a market driven project will be necessary otherwise no one will respond to the Request for Qualifications.

Ferrell agreed with Park’s idea about a market-driven approach, but said, “I just don’t think a 45-story building would fit into the community.”

After another discussion of the limitations, the vote was unanimous, however Kochmar said, “I only voted in favor of the guidelines to get the issue off the books and will oppose any proposals with construction higher than 200 feet.”

Mayor Skip Priest added that when attending the Mayor’s Institute on City Design 14 years ago, he learned that, “you should do something” in regard to a town center, making the point that something is better than nothing.

However, Kochmar said she learned in more recent years, at the same institute, it’s not a good idea to go too high in a low-rise community.

The Mayor’s Institute on City Design is a government-funded leadership initiative that allows mayors to network with leading architects and designers in regard to successful city planning.

The process of choosing a developer will continue in late June of this year when a Request for Proposal is drawn up. A public open house will be held Aug. 9.

The city plans on selecting a new developer sometime in September or October of this year.
Zoning laws could change look of Des Moines

By SETH POWELL
Staff Reporter

The Des Moines City Council is trying to adopt zoning changes to spur economic development and improve the city’s tax base.

The City Council has several goals, including improving pedestrian spaces, making more room for parking, and raising the allowable building height in the downtown area.

Mayor Bob Scheckler said that no changes will be made until a public hearing on June 9, at which time the council will try to adopt the changes and begin implementing them.

The hearing will be held at 7:30 p.m. at City Hall in the Council Chambers.

“It’s an attempt to improve the tax base downtown,” said Scheckler.

Des Moines has one of the worst per capita tax bases in the state, due mainly to its lack of business in the downtown area.

Scheckler said that with the current allowable building height, further development is almost impossible. The only way to go is up.

“Building height is the No. 1 topic everyone is talking about right now,” said Scheckler.

The new allowable building height would be 45 feet, as opposed to the current height of 35 feet.

The new zoning changes would even allow for buildings taller than 45 feet if sufficient public benefits are included in the project.

Another challenge that the city faces is the current water system.

South King Fire and Rescue has said that the system can’t deliver the required sustained flow of 3,500 gallons per minute for three hours for fire suppression.

Eric Clarke, the manager of Water District 54, which covers downtown Des Moines, said that despite the lower than required flow, people could still build new or taller buildings.

“There’s certain building criteria they’d have to follow,” he said.

Instead of building mainly with wood, the new buildings would have to be made predominantly from concrete and metal, said Clarke.

Local contractors say that it is 10 to 15 percent more expensive to build this way.

The city and Water District 54 have plans to put in new, bigger water mains before the end of the year, Clarke said.

“We’re going to put it out to bid here shortly,” said Clarke.

Clarke said the project would cost about $1.5 million. The water district will raise funds by selling bonds, and the city already procured a federal grant for almost $500,000.

Another change the council is looking at is making more parking space. Currently, there is a little bit of parallel parking space along Marine View Drive, but the council wants to change it to angled parking.

Scheckler said that these changes are much needed.

“Nothing’s been going on for many years,” he said.

Des Moines City Hall is located at 21630 11th Avenue South.

Students shouldn’t ignore health insurance, experts say

By JAMES LEE
Staff Reporter

You can stay on your parent’s health plan up until the new age of 26 with the new Affordable Care Act.

One in five recent college graduates are going without health insurance because they cannot find employment that provides coverage, according to Washington State Office of the Insurance Commissioner.

In fact, many college students are unaware of their rights that they can be covered with their parents’ health insurance plan.

According to GoInsurancer.com, 46 percent of college grads are not interested in health insurance.

The Affordable Care Act, also known as federal health care reform, was signed by President Obama on March 23, 2010.

Almost 31 percent of the total population between ages 18-24, and 28 percent of ages 25 to 34, didn’t have health insurance.

“You should have health insurance,” said Bill Webster, a business instructor at Highline.

The risks of not having insurance can change your life forever.

You can miss early detection of potentially serious medical disorders. Untreated health conditions can become serious.

Additionally, a sudden illness can come on rapidly no matter how good of shape you may be in.

Yet, the worst problem can be financial.

For example, last year, a 23-year-old graduate student at the University of Washington injured himself while on a snowboarding outing.

He suffered a head trauma. His overnight stay at the hospital after his emergency room visit stuck him with a $17,000 bill.

To find out more about PCIP, go to www.wshipt.org/PCIP-wa or call 1-877-505-0514.

Also if your health insurance company denies a benefit you believe is owed to you, you have a legal right to appeal that decision.

Call 1-800-562-6900 or visit www.insurance.wa.gov to find out ways to hold on to your rights.

The Affordable Care Act provides coverage, according to CNNMoney.com recently reported that 85 percent of college graduates now move back home after graduation because many of them are finding that moving back home is their only real option.

Unemployment plus debt is just bad news, Webster said.

If you have been uninsured because of a pre-existing condition, you may be able to join the Pre-Existing Condition Insurance Plan (PCIP).

“By not having health insurance, an accident can put you in debt.”

—Bill Webster, business instructor

It assures your rights to be insured as a dependent on your parents’ health insurance if you are under age 26.

The only exception is if your parent has an existing job-based plan and you can get your own job-based coverage.

Among all generations in the US, citizens between ages 18-24 are the most likely to be without health insurance.

Moreover, the city’s tax base is trying to adopt zoning changes to spur economic development, and improve the downtown area.

The risks of not having health insurance, an accident can put you in debt. It will bring down your credit score and, at the end, companies won’t hire if you can’t take care of your own money,” Webster said.

According to the New York Times, the average college debt rose to $24,000 in 2009, and it still follows an upward trend.

Additionally, a sudden illness can come on rapidly no matter how good of shape you may be in.

Yet, the worst problem can be financial.

For example, last year, a 23-year-old graduate student at the University of Washington injured himself while on a snowboarding outing.

He suffered a head trauma. His overnight stay at the hospital after his emergency room visit stuck him with a $17,000 bill.

To find out more about PCIP, go to www.wshipt.org/PCIP-wa or call 1-877-505-0514.

Also if your health insurance company denies a benefit you believe is owed to you, you have a legal right to appeal that decision.

Call 1-800-562-6900 or visit www.insurance.wa.gov to find out ways to hold on to your rights.
Student shares experiences to change lives

By ELIZABETH MIKLOVICH Staff Reporter

Two years ago Kathryn Troxel was battling severe substance abuse and homelessness. Today she is on the honor roll at Highline.

“Two years ago, I was living on the streets, smoking crack and drinking like a fish. I used to shoot heroin when I quit that about three years ago, I then turned to crack,” Troxel said. “Every day was the same. I would get up and find a way to buy some crack and go to the neighborhood convenience store and buy a couple Joeses [an energy drink stronger than regular beer] or go to the liquor store and get a pint of gin.”

“I would then proceed to get high and I felt like I was in a horror version of the movie Groundhog Day,” Troxel said.

“One day, a little over two years ago, I woke up in the seedy motel where I periodically stayed, usually on the first of the month, and I looked in the mirror and cried,” Troxel explained. “I was tired and I just felt I couldn’t face another day of doing what I had been doing for years.”

“I checked myself in detox and from there, went to Seamar treatment center which is just a few blocks away from Highline, for 7 months,” Troxel said. “I have been clean and sober for almost two years and I feel great.”

Troxel is now very involved in Alcoholics Anonymous. Troxel won a Women in Action Award this year after she was nominated by fellow students and co-workers for her ability to overcome addiction and homelessness. They said that she is a great example for students.

“I have a 4.0 GPA in the marketing program and also work at the college under my work study grant. For someone who has spent over two years in prison and been in jail 17 times, that is amazing. I have accomplished more in the last two years, than I did in 10 years prior,” she said. As for being a role model, Troxel has advice for today’s youth.

“I would like to pass on to the youth today this message: youth is something that passes very quickly, it is only a small portion of your life. The choices that you make today, whether they are good ones or, in my case bad ones, will dictate the life experiences that they make good choices.

Brice earns Ph.D. with family’s help

By ELIZABETH MIKLOVICH Staff Reporter

That’s Dr. Brice to you. Darryl Brice, instructor in the Sociology Department at Highline, has been grinding away to finish his doctorate and has now done it.

Dr. Brice received his Ph.D. in sociology from Loyola University in Chicago on May 27.

“It still seems very surreal to me,” Brice explained. “It was a whirlwind trip back to Loyola last weekend; I arrived as Mr. Brice and left as Dr. Brice. It is still sinking in that my hard work is paying off.”

Brice earned his bachelor’s degree in political science and justice studies from Frostburg State University in Maryland. Then went on to Loyola University and received a master’s in sociology.

Brice grew up in Baltimore and was the youngest of three boys.

“My brother Michael wanted me to attend a private Catholic school. However, my family could not afford that, so Michael joined the military to pay for my tuition,” Brice said. “My mother also often worked two three jobs so that I could attend private school.”

Michael wanted Brice to have a good education, Michael and Brice’s mother both wanted Brice to overcome the poverty of Baltimore and become an educated man.

“I dedicated myself to studying and became a college student,” Brice said. “I have been an instructor in the Sociology Department at Highline since 2005 and was awarded tenure in 2007. He also teaches coordinated studies and global diversity and globalization studies as well.

Brice is also the faculty advisor for the Social Justice club at Highline.

“Highline students are wonderful. I love to help them with the life experiences that they bring to me in my classes,” Brice said.

Robyn Richins coaches students with passion

By ELIZABETH MIKLOVICH Staff Reporter

Robyn Richins’ passion for her job and her life is easily seen by the students who see her coaches in the life skills program.

Richins is the Life Skills facilitator and retention adviser for the Highline Women’s Programs/WorkFirst services.

Life Skills helps to build self-awareness, and shows students how to balance school, parenting and life responsibilities.

Life Skills offers a safe supportive environment for students who are receiving temporary aid for needy families to attend for coaching tips on educational and career planning, navigating through the college system, community resources and retention services for completing certificate and degree programs.

Life Skills is available during the college quarter breaks and has open entry/continual enrollment to meet the needs of WorkFirst parents.

Workshops are taught periodically throughout the week to help move students toward their plan of becoming self-sufficient.

Students who attend Life Skills are typically in school part-time, working on earning their GED or high school completion or in a work-approved activity or planning their college training to start a future quarter.

Richins regularly shares her own story with the students in the program. Her self-disclosure of her own life and the obstacles she overcame help the students to relate Richins, she said.

“My family was truly homeless. Not the kind of homeless family that lives in shelters or in their car, but a sleep-on-the-sidewalk homeless when I was growing up. I pulled myself up from poverty,” Richins said.

“When I share this with the students, I hope to inspire them to see that overcoming very difficult things in life is possible.”

Overcoming tragedy and working through grief are also part of Richins’ skills that she helps students with.

“I share with them that a death in my family 14 years ago changed my life forever. I had to learn to share my story with people and work through my grief,” Richins said. “I see so many students with grief issues, such as the loss of a job, loss of their home, and loss of a loved one. Telling their story could help someone else work through their loss a bit better.”

Richins explained, “I am also very passionate about students’ learning to be accepting. I want them to have a passion for what path they take in life and not see their job as just a paycheck. I want them to be excited and empowered to do their job.”

With a background in human services, Richins said she is in her dream job.

“Every day was the same. I felt like I was battling severe substance abuse and homelessness. I pulled myself up from poverty,” Richins said.

“My brother Michael wanted me to attend a private Catholic school. However, my family could not afford that, so Michael joined the military to pay for my tuition,” Brice said. “My mother also often worked two three jobs so that I could attend private school.”

Michael wanted Brice to have a good education, Michael and Brice’s mother both wanted Brice to overcome the poverty of Baltimore and become an educated man.

Brice is also the faculty advisor for the Social Justice club at Highline.

“Highline students are wonderful. I love to help them with the life experiences that they bring to me in my classes,” Brice said.
Glennon takes memories with him to retirement

By AUSA GRAMANN
Staff Reporter

Highline professor Jim Glennon is retiring after 50 years of teaching.

Glennon’s career began at Rosalia (a small town in Whitman County in southwest Washington), where he was both a teacher and coach for five years. From there, he moved to Mt. Rainier High School, where he taught for 29 years. Finally, Glennon has spent the last 16 years at Highline, through a series of one-year contracts.

“When I came here, it was like I had died and gone to heaven,” Glennon said. Over the past 50 years, Glennon has collected many stories and memories, which he will take with him into retirement.

“If I didn’t take the memories with me, I don’t know if I could retire,” he said.

Over the 50 years that he taught, Glennon estimates that he taught around 16,000 students — the vast majority of whom he liked. Glennon said he could probably count on one hand all the students he ever had that he wasn’t glad to see each day.

Glennon said that the students he didn’t care for were the ones who showed no interest in learning. Glennon said he always worked with students to make sure they achieved their best.

“I’m there as their protector,” he said.

Glennon said he hopes that his students all find something they love doing, just as he loves teaching.

Out of the 50 years Glennon has taught, he said he has only missed about 15 days of school. “The students are my battery,” he said. He always believed that his students are the best cure.

“If I can get to my students, I’ll be OK,” said Glennon. He said that, over the years, this has always proved to be true.

“My students, next to my wife, are the most important people to me,” he said. Many of Glennon’s students have come to him, just to have a listening ear, he said. Students stop by his office, pour their troubles out, and when they have talked themselves to a resolution, Glennon said they thank him for helping them out.

“Sometimes, I don’t know if I’m a teacher, a preacher, or a bartender,” Glennon said with a chuckle.

Glennon said he likes keeping in touch with his students. He is constantly bumping into former students, whom he remembers well. Glennon has many stories from his years teaching that he loves to share.

Glennon has also built a reputation among his students as “The Penny Guy,” in reference to his quick reflexes. Glennon said it has been one of the best ways he has found to break the ice with students.

Glennon places a penny in the students’ open hand, and tells them to close it before he takes the penny. Few students have succeeded in being faster than him.

Glennon said that this is an easy and effective way to make contact with students, and is one he has used for a long time.

Glennon said that he may write a book comprising some of his stories and memories from his 50 years of teaching.

Glennon said he is getting excited about retirement. After his wife had two strokes, things were put into perspective for him. This was one of the factors contributing to his retirement.

Glennon said he is excited to spend more time with her. “We finally have time enough for each other,” he said. “No matter what I do, it’ll be with her.”

Glennon’s retirement is a bittersweet time, but one he plans to enjoy. “I’m gonna enjoy the free-dom,” he said.

Professor climbs to new heights to balance work and play

By KELLY CASSINERIO
Staff Reporter

From being a full-time instructor to rock climbing in her spare time, Chris Gan has quite a busy life.

Gan teaches anatomy and physiology at Highline. She has been teaching for seven years, and before Highline, Gan taught at Rogue Community College.

Gan studied at Humboldt State University in Arcata, Calif. There, she received a master’s degree in biology and she also received a bachelor’s degree in both biology and zoology.

With the end of Spring Quarter coming up, Gan has been pushing her classes and trying to end the quarter strongly.

In her microbiology class, her students have been given two unknown bacteria and have to find what type of bacteria they are all on their own.

“While it can be intimidating and overwhelming for many of them at first, I am often so incredibly excited for and proud of them,” Gan said. “I love to just sit back on the sidelines and watch them put all the skills they’ve learned over the term to use.”

Gan really enjoys teaching her classes and watching her students grow, she said.

“Teaching is my passion. I am incredibly lucky to look forward to going to work,” she said.

Gan has set the standards high for all her classes, but she does not apologize for it, she said.

“About 80 percent of her students are pre-nursing or pre-med. It is important they learn the material because they will have lives on their hands in the future and they need to be ready, said Gan.

Gan said she has personally seen the fruits of her labor when she was teaching in Oregon at Rogue Community College.

Her mother was diagnosed with Parkinson’s disease several years ago. Six years ago she was put in intensive care for 13 days. Six of the nurses helping her mother were some of her best students, Gan said.

“I knew them and trusted them,” she said. That is why she pushes her students to do their best, Gan said.

More recently, Gan has become a part of many committees at Highline.

“I am honored to represent my division on the Tenure Review Committee, Discipline Committee, and Faculty Excellence Committee,” Gan said.

A student club she strongly supports is PRISM.

“They are an amazing group of people [and] I’m really proud of them and what they stand for,” Gan said.

Gan also spends a great deal of time outdoors, either rock climbing or mountaineering.

Last year she took part in the Mountaineers Basic Alpine Climbing Course where she climbed Mt. Rainier, Mt. Baker and Emmons Glacier over a span of eight months, Gan said.

This year, she has been helping out with the Mountaineers Basic Alpine Climbing Course by volunteering her time and knowledge.

“I have spent a lot of time volunteering to teach the same class and am also involved in filming instructional technique videos for the organization as well,” Gan said.

Glennon takes memories with him to retirement

Professor Jim Glennon is announcing his retirement, after 50 years of teaching.
Herpes virus has been linked to other illnesses

**By AMANDA SILLS**  
**Staff Reporter**

Many people associate herpes with cold sores that last a lifetime, but there are more serious complications to most people, said Mira Beins, a biology professor at Science Seminar last Friday.

Science Seminar is a weekly series of presentations on topics of scientific interest, by professors and community members. The herpes virus is widely talked about, included in the media and even joked about. However, in general when people talk about herpes they think of sexually transmitted diseases; mistakes that cannot be changed.

“Herpes is a virus which is different than bacteria. Beins said she wants to bring awareness to students of the serious risks viruses have compared with bacteria. Viruses and bacteria are two very different things,” Beins said.

Bacteria are like cells which can change, while viruses cannot.

“There is no way a virus can create another virus,” Beins said.

Receiving the correct treatment for herpes is important and if people neglect treatment, they will have a higher risk for uncommon diseases.

After someone is infected with the herpes virus, they may not be aware of the virus for some time which can lead to cancer growth.

“People may not know that they have at least four herpes viruses in them,” Beins said.

The next Science Seminar, June 3, will be the last seminar for Spring Quarter presented by geology professor Carla Whittington on Living on Unstable Ground: The Causes, Signs and Mitigation of Landslides in the Puget Sound Region.

Science Seminar meets at 2:20 p.m. in Building 3, room 102.
The creatures of the Highline Laboratory

Biology lab animals act as pets and learning tools

By AMOS NISTRIAN
Staff reporter

Highline’s campus is diverse with the young, the old, the furry, and the cold-blooded. As students range in cultural and ethnic backgrounds, so do the animals in the biology lab. The lab is currently home to 18 animals; including two ball pythons named Monty and Balak; Cody, a red tail boa constrictor; two uromastyx mali lizards named Oma and Mr. Smith; a rubber boa named Gumby; a bearded dragon lizard named Kedaka; a tortoise named Sam; Shoorik, a Russian tortoise; a turtle named Slider; a parrot named Squawky Dude; four axodotylic; and a tank of fish.

“The animals we have here, the reptiles were all abandoned or neglected in one way or another, and because my wife and I belong to the Pacific Northwest Herpetological Society as institutional members through Highline, we’ve adopted a lot of these animals and rescued them,” said biology lab technician Dom Walter.

“For example, Kedaka, our bearded dragon, wasn’t handled until adult size when he came here,” Walter said. “His previous owner was too afraid to handle him so he stayed in his cage his whole life.”

One of the ball pythons in the lab was rescued after he was taken from a drug raid, where he was very skinny, neglected, and hadn’t been fed, he said.

Walter, along with his wife, Sabine, care for the animals in the lab, and he also integrates the creatures into his curriculum.

“One of the things we really like, since it is biology, is the study of life. That’s why we have animals here,” Walter said. “It’s not just to find interest in them as far as watching them and that kind of stuff. In some classes we use them for comparative anatomy and we also do classification as far as kingdoms, family, and that type of stuff.”

The lab is also home to a cat named Jericho, who was taken in after the former lab cats, Stubby and Domino, died. The Walters have since started a FatCat Fund, in order to collect money to support the animals in light of the budget cuts.

“Although the cats are no longer with us, we have several other animals in the lab, so we have decided to continue the FatCat Fund in memory of the cats,” said Walter.

Donations to the fund can be made directly to the Highline Community College Foundation, which can be reached at 206-878-3710, ext. 3774.

“Although the cats are no longer with us, we have several other animals in the lab, so we have decided to continue the FatCat Fund in memory of the cats,” said Walter.

Donations to the fund can be made directly to the Highline Community College Foundation, which can be reached at 206-878-3710, ext. 3774.

The biology lab is located in Building 12, and is open to all students, staff, and faculty. For more information about the biology lab animals, visit www.highline.cc.edu/biologylab.

Summer vacation has students in a scramble to survive spring

By MAX HENRY
and KELLY CASSNERIO
Staff reporters

Highline students are making plans for the summer as Spring Quarter comes to an end. While some students are focusing on taking classes this summer, other students will be visiting colleges, going on vacations, or looking to make some money.

Abdul Rahim said that he hasn’t really thought about what he will do this summer for recreation, but that he was focusing on finding work.

“The only thing I’ve been thinking about is finding a job. That’s been my main goal,” said Rahim.

Another student, Erin Mullan, said, “I’m going to be working at the West Campus Music Center.”

Peyton Tomayo said, “I’m going to be a nanny for my mom’s friend’s kids.”

While some students are taking up a job over the summer, others will be vacating.

“I’m going to New York in June for a week for a family vacation,” said Kendall Hutchins.

Another student, Ben Friedland, said he was looking forward to traveling with his family this summer.

“I’m going to New York. It’s just a family vacation,” Friedland said. “I’ve been to New York plenty of times. It’s a fun place.”

One student said he is going to be on set on a television show this summer.

“This summer I’ll be on the HBO set of Eastbound and Down with Danny McBride,” said Nick Costanza. “I’ll be delivering coffee on set.”

Other Highline students will be tying in academics with their activities this summer. Scott Johnston and Zack Ruiz-Bednarski are both planning on taking classes this summer.

“I’ll be right here probably, working on my laptop,” said Ruiz-Bednarski.

Johnston is going to be taking only one class this summer, but is making plans to travel to California to visit colleges.

“I’ll be going to California to visit some colleges down there. I want to go to school outside the state,” Johnston said.

Kirsten McFarlane also has college on her mind this summer.

“I’m probably going to visit Washington State University,” she said.

McFarlane isn’t all business though; she is looking forward to a gaming convention called P.A.X.

“I’m going to be P.A.X. It’s a gaming convention held every year downtown,” she said.

Many students are looking forward to the summer, but some are still wrapped up with the end of Spring Quarter.

“I’m a little bit stressed [for finals], but I’ll study and get it done,” said Danny Frost.
Jobs

continued from page 1

make some money,” said Manpreet Bhandal.

Many employers began filling positions well before the summer months. Some students started applying as early as April.

Popular summer jobs such as Family Fun Center and Wild Waves have completed their hiring for the summer.

“I was hired at Family Fun Center in April, but I don’t start until school is out,” said Emily Warren.

However, for those students struggling to find a job, or feel like it’s too late, many companies are still looking to fill positions.

The key is getting on the ball and applying to several places immediately.

More than 20 employers were present at Highline’s spring job fair last Thursday.

Many are looking for college students to work anywhere from a few hours a day to a full 40 hours a week.

Taco Time is looking for employees to work for the summer and beyond, so those who plan on working during the school year could potentially have a job that lasts for the whole academic year.

“The jobs for Taco Time would not just be for the summer, but if someone is looking for employment we are actively accepting applications for our Des Moines, downtown Renton, and Fairwood locations,” said Joe Eggers, south district manager of Taco Time.

FedEx is looking for package handlers as well for the morning and evening shift. Shifts are scheduled for Monday through Friday, or between Tuesday and Saturday.

One must be 18 years of age or older, enrolled in high school, and be able to pass a criminal background check in order to qualify for the job.

Besides earning money and potentially opening doors to other job opportunities, FedEx package handlers can receive great benefits as well.

After working for more than 60 days one can receive up to $1,500 for tuition assistance, which could help many students pay for an entire quarter at Highline. After clocking in over 1,000 hours one would eligible for a full quarter at Highline.

Other employers who are offering job opportunities include Avon, Kelly Services, and Plato’s Closet.

Avon is looking for sales representatives; Kelly Services is seeking general warehouse fork-lift drivers, customer service representatives, and administrative assistants; and Plato’s Closet is looking for someone to fill a sales associate position.

Recruiters from Holland America and Princess Cruises were also on hand with information on open positions and open eyes.

Some of the positions currently available are guest services, rail services, driver guides, lodge services, and fleet maintenance.

Compensation rates are between $9 and $13.25 depending on the position.

Seasonal employees are offered highly discounted rates for personal cruises and travel, so there is potential for employees to get a cheap vacation out of the deal.

At Southcenter Mall, in Tukwila, there are many places to apply.

“We are still hiring and currently filling positions,” said Chris Barnes, a manager at the Southcenter AMC movie theater.

“Students can benefit by applying because there are lots of hours available and employees also get mall discounts at stores,” he said.

Air

continued from page 1

Department of Natural Resources are concerned about people burning outside when conditions are dangerous,” said Wisti. “For example, outdoor burning in hot summer weather can easily spark a wildfire that gets out of control.”

In an effort to prevent wildfires, the Clean Air Agency places burn bans that restrict people from burning materials both indoors and outdoors.

“We can call burn bans based on federal air quality standards meant to protect human health,” Wisti said.

Information about burn bans are available at www.pscleanair.org/airq/burnban/default.aspx.

“Smoke from wildfires can travel a long way from the actual fires themselves,” said Seth Preston, communications manager for the Air Quality and Toxics Cleanup Programs of the Washington Department of Ecology.

“For example, last summer the Seattle area was inundated with smoke from wildfires up in British Columbia. It’s hard to predict when fires will happen and where the smoke will travel,” Preston said.

“Smoke is difficult, because it can be blown in from far away and we can’t control it,” said Wisti. “However, the major source of air pollution is from motor vehicle emissions — our personal cars.”

The Washington transportation sector alone, which includes cars, trucks, heavy-duty vehicles, trains, airplanes, and ships, produces about 47 percent of local greenhouse gases.

“Compare that to the largest industrial source, the coal-fired TransAlta power plant near Centralia, which produces about 10 percent of greenhouse gases in Washington,” Wisti said.

“So, bottom line, driving less means less air pollution. We can all try to do that. And we also can try to use vehicles that are more fuel-efficient to reduce emissions,” said Preston of the Department of Ecology.

Experts say addressing the long-term problem of reducing the amount of pollution from vehicle emissions can only be done by reducing the number of vehicles on the road, driving less, and ensuring that the vehicles being driven are as clean as possible.

“Biking, walking, car or van-pooling, riding the train, bus or ferry, switching to manual or electric yard care equipment will all help reduce the long-term air pollution levels,” said Wisti.

“But, it’s the number of vehicles and how often we drive them, and their emissions that really count.”

For more information on the air quality in Puget Sound and alternatives that can be taken to help decrease pollution levels, visit www.pscleanair.org.
Yoshida
continued from page 1

own creative wings.

She said she collected the journals she’d written over the years, summoned her life experiences, and steered her energy toward writing novels.

“I originally began writing Flaherty’s Crossing as a source of personal therapy after losing my beloved father to colon cancer,” Yoshida said.

She said the loss of her father left her angry, but after writing the story, her retrospet prompted her to consider the fact that many sons and daughters had to deal with the same hardships and even more heartbreaking situations.

“Rather than a memoir, my debut novel evolved into a woman’s fictional journey, which brought about the resolution I needed to find,” Yoshida said.

She said she expected the writing to go to press, touch lives, or win literary awards.

The book received the Publisher’s Award of Excellence in 2010 and was a 2008 finalist for the Romance Writers of America’s Golden Heart contest.

Yoshida has committed all profits from the sale of the book to cancer research at Portland’s Providence Medical Center.

A screenplay was created and is currently under consideration for a Hallmark movie.

“Highline opened my eyes to new possibilities by providing committed, enthusiastic instructors who encouraged me to challenge my abilities and to strive to reach my potential,” she said.

She hopes that her story of success and humble beginnings at Highline encourages students to use their potential with no waste.

“It’s never too late to become the person you could have been,” Yoshida said.

“There’s always a new door within reach, a soul-satisfying accomplishment waiting in store, if you just keep your eyes open to possibilities.”

Bridging the gap between home and Highline

By YURI NISHIZAKI
Staff Reporter

Many international students have difficulties with English, but the key to overcoming that is to face the problem and be confident in themselves, a Highline official says.

Highline has around 500 international students during any given year, coming from all over the world. They come with a variety of abilities in English. Some study at intensive English programs such as Kaplan, while others jump into the fire of regular classes in English.

International students here say that one of their challenges is getting outside of the group of people from their home country or region. That doesn’t necessarily challenge them to learn more English.

Kaplan student Sangbin Park from Korea came to America on March 21. He said he spends much of his time with his Korean and Japanese friends from his classes. He feels the limitation of learning English with other Korean and Japanese people.

“When I talk with people who want to learn English, we use English with each other, but we can’t correct mistakes,” he said.

“We know their personalities and culture, so we can more understand each other than other people,” he said as a reason to be with other Korean friends, even though he said that the best way to improve his English was to make American friends.

Kuan-Lin Chen is a Highline student from Taiwan, and entered Highline in September 2010. She was in a high school in Florida as an exchange student before.

“It was quite hard. I was the only exchange student there [in Florida],” she said.

“They didn’t see Asian people there. They thought I was rare,” Chen said.

Some talked to her as though they thought she was interesting. She added, “In Florida, there were only American students… I have a choice to talk with American or international students now, so it doesn’t help me improve my English,” because she tends to be with other international students.

“I have no challenge here. There are too many international students who can cover me,” Chen said.

Hiroki Tsukamoto, Kaplan student from Japan, hopes to become a police officer in America. He plans to transfer to Highline to study criminal justice.

“There weren’t a lot of Japanese students, but Kaplan got a lot of Japanese students this quarter, and it made my English possible,” he said.

“Even if I speak English, Japanese students answer in Japanese… Some people are afraid of speaking English. And I think speaking Japanese is more comfortable, and speaking English is sometimes stressful,” he said.

Tsukamoto said Kaplan students have different schedules from Highline ones, and that makes it difficult to be friends with American students from Highline.

Nonetheless, the important thing is to start talking with people, even though it’s comfortable to be with the same people, said Aimee Moon, associate director of the International Student Programs.

“It’s just really comfortable and easy to stick with their own group. It’s hard to make decisions to do something difficult,” such as standing up and going to talk with American people alone, Moon said.

“They have to break up the comfort zone. People won’t walk up to talk with them. Successful people [international students] are breaking out of their own country, and talk with people not being shy,” she said.

Sanee Suehiro, a Highline student from Japan, entered Highline last September.

“Every time I talk with American people, and every time I have to repeat what I said, I realize my English hasn’t been quite improved yet,” she said.

“My parents pay for the tuition here, but the level of my academic achievements are still low. I feel sorry for them,” she said.

New student officials to focus on unity and awareness

By MEGAN WALLIN
Staff Reporter

Highline’s new Student Government welcomes new challenges while focusing on unity and sustainability.

“Unity is what we discussed the most (while campaigning),” said the new president, Zoey Myagmarjav. Myagmarjav and Enrique Ramirez were recently elected to Student Government as president and vice president.

“Student Programs does a lot of things already,” said Myagmarjav, giving the example of event coordination and club enhancement. However, she believes they can also do more to raise student awareness of opportunities for further involvement.

“One thing this campus needs is to promote our Student Government,” Myagmarjav said. She suggested that students and faculty do this by networking.

Vice President Ramirez agreed that students need to be “not just involved with Student Government, but also clubs and committees.”

“Highline students need to see that other students are actually doing something,” Myagmarjav added.

Winning by more than 50 percent, Myagmarjav and Ramirez attributed their win in large part to their level of involvement prior to running. Still, it surprised them both.

“I thought it would be way closer,” said Myagmarjav. “The other candidates were very qualified.”

Ramirez echoed this sentiment. “I thought our level of involvement and positions here at school helped,” he said.

He added that although he felt confident, “when I saw the numbers, it was a pretty humbling experience.”

They also thought their strategy to run as a ticket helped them with voters.

Myagmarjav said that running together made them more recognizable. “People noticed—Hey they’re running together.”

The slogan also caught people’s attention, she said. “People would say “EZ Choice… That’s clever!”

Ramirez cited club support as another main factor in their win, and both Myagmarjav and Ramirez say club involvement is the key to increasing Highline’s sense of unity.

“That unity could also help students support the new sustainability policies, which is another one of the new Student Government’s goals.”

Ramirez said that although new recycling bins have been set up around campus, some students do not seem sure of how to properly use them.

Myagmarjav and Ramirez both said that Student Programs needs to not only promote the new recycle bins, but teach people what is appropriate to put in there.

Highline’s sustainability policy is still very new, and Myagmarjav remarked that she had already found food in a recycling bin.

She said one challenge this year will be finding ways to enforce sustainability rules while encouraging students to get involved.

That and many other issues will be facing the Student Government this year, and they are embracing their new tasks.

“From what I see from what Olga [outgoing President, Afi-achuk] does, I think the students will cooperate more with administrators,” Myagmarjav said of what she expects from her new role.

“I know I’ll be working with the [Services & Activities] budget, as well as working closely with students,” said Ramirez, who said that he is looking forward to “being an ear” for the Highline student body.
Finding a new perspective

Sometimes we don’t stop to think about how good we have it here in America. Being thankful is a lesson we often learn only after we get a wake-up call, which can come in many forms.

Mine recently came in the form of an interview with an international student.

International students who come to Highline each have their own goals. One Highline student, Ahmad Ali Syahbana, came from Indonesia to major in tourism and hospitality management, and to take new ideas back to Indonesia.

Syahbana said the contrast between Highline and the previous really nothing he attended in Indonesia was stark. He said that, coming from a Muslim culture, the diversity here was very new to him.

He said that in Indonesia, things were very uniform. There was a lot of gender segregation in his old school. Syahbana said, in Indonesia, opposite genders did not interact.

“We have separations,” Syahbana said.

The diversity he experienced at Highline was new to him. Here, he said that background doesn’t matter and differences don’t matter. People are just people and they interact together.

“There’s everything is so different,” he said. “Everything is so unique.”

“It’s like liberty here,” Syahbana said.

In the U.S., we fight hard to keep diversity from becoming an issue. We want opportunities to be open to all, regardless of gender, culture, or other diverse characteristics.

This freedom is something that I, at least, take for granted every day. Instead of being grateful for the opportunities I have, I instead find something I can complain about.

After talking with Syahbana, I was more aware of how good I really do have it here.

Syahbana has been observing everything for the nine months he has been in the U.S., because he wants to understand, and be able to take knowledge back home with him.

“I want to get the benefits,” he said.

Syahbana said that care for disabled people and care for the homeless are two things he would like to see changed in Indonesia. Currently no such care exists there, he said.

When I heard Syahbana talk about the kind of things he wanted to take back to Indonesia — especially care for disabled and homeless people — it was another wake-up call for me.

Current budget discussions have talked about taking away some of these benefits. I have never personally experienced these benefits, nor experienced how beneficial they really are. But many people have.

Often times, when evaluating budget cuts, it is so easy to think in terms of what will most benefit me. I think this is something that many of us are guilty of doing. I think it’s time for us to make some changes in our thinking and actions. Perhaps there are more benefits for everyone if we were all willing to “tighten the belt” in a few areas and make a few sacrifices now.

However, changing thought processes and thinking in terms of “the greater good” and long-term results can’t be done overnight, it is a gradual process of learning one lesson at a time. We learn these lessons by being observant and listening to new and different perspectives. These lessons are everywhere, waiting to be found.

Alisa is opinion editor of The Thunderword, at least until next fall, when she becomes editor-in-chief.
Money management made easy

Do you ever feel as though you are running out of money each month before your next paycheck? Or do you feel the money you get is never enough to cover the costs?

With the ongoing economic downturn in the U.S. and rising prices everywhere, we as college students must be more strategic in managing the most difficult yet easy thing in our lives: money.

The simplest way to track your spending is by creating a personal monthly budget plan.

The first step is listing all the income you will earn in the next month. This may be allowance, student loans, employment salary, scholarships or interest from savings. The total is your total monthly income.

Next, find your total monthly expenses by combining your academic expenses and personal expenses. The last step is to subtract your total expenses from your total monthly income. If you have some money left, you operate on profit. This means you have disposable income that you can use for savings or investment. You can start investing with simple investment methods, such as buying precious coins. If you feel more confident, investing in the stock market by purchasing stocks or shares is a very wise decision, however, you should consult with a business instructor or financial adviser to get good recommendations of brokers that you can trust with your money.

If you don’t have any money left over in your budget, you operate on the break-even point; you are not making profit or loss which is acceptable. The worst case scenario is when your total monthly income cannot cover your total monthly expenses, which is called loss. This situation needs special attention, and you should rebalance the list of your total monthly expenses and cut unnecessary spending. Instead of eating out or going to the movies, you can search for free entertainment in your communities. Movie Fridays on campus are a good example of free entertainment.

If you use credit cards, choose a card with low Annual Percentage Rate (APR) or No Annual Fee at all and a Long Disgrace Period (the length of time between the previous month’s closing date and the next month’s due date when you can avoid charges for new purchases if you pay your total new balance in full). Use your credit card responsibly, and differentiate between your needs and wants. In conclusion, be wise with your spending. Like the old saying; a penny saved is a penny earned. When we name something, we think carefully about it because we want the name to be meaningful and unique.

Usually, scientists and mathematicians use their names directly to name their inventions, such as Brownian motion (Robert Brown, 19th century), the Fibonacci sequence (Leonardo Fibonacci, 13th century), and so on, because it represents a person’s achievement and honor.

Although many theories or concepts are named after people, it is not always named after the first person to discover. Instead, the name might be the result of historical circumstances.

While I was researching Pascal’s Triangle, I learned that the earliest record of this triangle was in ancient India in the 10th century. It was in a treatise named Bakhshali Poem. Around the same time, Persian mathematicians Al-Karaji and Omar Khayyam also discussed the triangle. It made me wonder why the triangle isn’t named Al-Karaji’s Triangle or Khayyam’s Triangle. Maybe it was because they discovered only pieces of the triangle. Remember, according to my research, in China, the earliest existing Chinese illustration of Pascal’s Triangle is from Yang Hui’s book Xiangjie Jiuzhang (“Comprehensive Treatise on Calculation”) which I learned in my research that in China, the triangle is also known as “Yang Hui’s Triangle” or “Jiaxian Triangle.” In India, the triangle is sometimes called “Khyayam’s Triangle.”

Calling it Pascal’s Triangle masks the fact that many non-western cultures have made significant contributions to mathematics and science.

Personally, I think it still can be named Pascal’s Triangle, but the other names should be added to textbooks and be formalized in the world.

This is the best way to help students understand the triangle. This publication made the triangle popular in western culture, and has since been called Pascal’s Triangle.

It seems to me that Pascal was in the right place at the right time, historically speaking, so I decided to attach the name to the triangle. Remember, according to my timeline, Jia Xian and Yang Hui discovered the triangle much earlier than Pascal.

Cleariy, Blaise Pascal was not the only person to discover the patterns and operations in the triangle. However, when we study about Pascal’s Triangle, there is no mention of other contributors in most textbooks. This is not fair to other contributors who made big contributions much earlier than Pascal.

I was happy to learn through my research that in China, the triangle is also known as “Yang Hui’s Triangle” or “Jiaxian Triangle.”

In my research, I think the triangle is sometimes called “Khyayam’s Triangle.”

Calling it Pascal’s Triangle masks the fact that many non-western cultures have made significant contributions to mathematics and science.

Personally, I think it still can be named Pascal’s Triangle, but the other names should be added to textbooks and be formalized in the world.

The important point here is: The name does not necessarily reflect who discovered it.

Jolanta Liu is a Highline student.

Thanks to her friends, Sheila Lengle rediscovers her artistic passion

By MATIE MICHALEK
Staff Reporter

After overcoming her illness and discovering the healing power of art therapy, Sheila Lengle has got her artistic passion back and is painting once again.

Before her lapse in painting, Lengle owned two galleries in West Seattle. She was teaching and very supportive of the artists in her gallery. She later had to give up her passion to receive medical care when she was diagnosed with cancer and also heart complications. Lengle’s epiphany came to her when visiting her hometown in California, where some of her old friends motivated her to get back into painting. Now she has her artistic passion back and says she is optimistic about the future.

“I totally lost myself with my illness, lost my verve, for 10 years,” she said. “And picking up the brush, and pulling myself out of it, I got my creative mojo back. I didn’t know the Sheila I had become.”

Not only is she painting again, but she has developed a new style. Her works are kiltered with gently curving flowers and plants, some real, some made up. Some of her more abstract and impressionistic pieces include various geometric shapes colliding and layering on top of each other.

“Color and art have brought me back from the depth,” said Lengle. “The more I painted, the more I got into getting free-
er.

Other works of hers consist of colorful flowers with bright backgrounds, as well as honey paintings of foods.

Lengle has an “aha moment” with almost all of her paintings. “I paint and I let it kind of tell its story. I just start a painting and all of a sudden it stars grow-
ing,” she said. “I just can’t leave it alone.”

The next step for Lengle is to promote her work. She has been contacting people to show her art, and had some of her work turned into postcards to sell. Many of her pieces have the potential to be turned into murals for rooms or nur-series. Lengle says.

Some galleries are also inter-
terest in showing her work, which is a great step for some one to get their work noticed. Lengle said she is very excited to get her work out there.

“I’m a business person and I’m all high powered on market-
ing,” she said. “I’m just ready to explode out there like I’m fresh and new again.”

Lengle’s website is Leng-
leart.com. There, she has more information on her story and viewers can look at all of her ar-
istic achievements.

“I believe that we came to believe everything is in place.”

Breeders Theater returns to the E.B Foote Winery

By JONNY MCGUIRE
Staff Reporter

Breeders Theater is set to return to the E.B. Foote Winery starting July 15.

Back by popular demand, Breeders Theater will return for a run of Helpdesk, a play about five women who work at the customer service desk of an office computer equipment com-
pany. Across the street, a young man is in love and is about to confront them.

The pending sale of E.B. Foote winery in Burien seemed real to ending Breeders Theater’s 10 year run at the winery. How-
ever, as the sale fell through, the winery will now be open through August as winemaker Sherrill Miller sells off the last of her stock.

Laura Smith, one of the cast members of Helpdesk, said she particularly enjoys the perks of working at a winery.

“IT’s a much more casual atmosphere with none of the ‘trappings’ that make up so much of a traditional theater performance,” said Smith.

We act without fancy sets, props, lighting, sound cues or even curtains. But that is what makes it so fun,” said Smith.

The proximity of the audi-
tience also makes the experience more fun for her.

“You can look right into their eyes,” said Smith.

Watching one of the perfor-
mances is very different from acting in one, said Smith. “I was in four Breeders The-
ater shows before I went to ac-
tually go see one, and it was such a blast. Being an audience member, I finally understood why the shows sell out.”

Breeders Theater was found-
ed in 1999 by Highline profes-
sor T.M. Sell. Since then the cast has performed at many different venues, including Highline, as well as 20 shows at the E.B. Foote Winery in Burien.

Video warriors

Highline students find gaming is the perfect mind candy

Roughly over half of the students at Highline play video games, according to a recent unscientific survey. Those that admit to playing videogames say they at least own two or more gaming systems. The reasons why people play videogames are varied.

"It's a nice mental relaxer," said Halden Richards. "Sometimes it's just nice to veg out.

"I would think it's the same reason why others enjoy watching movies or reading books," said Ian Cawley. "Because it's entertaining and it's fun to enjoy new things."

"I really like some of the story elements in video games," said Christina Pom. "My favorite type of game, however, is the Survival/Horror genre. They're just interesting in a lot of ways," said Patrick Thompson.

"It's amazing to see the creativity that goes into one of these games or the skill that is varied greatly from a few hours a month to a few hours each day."

"It would say I get in half an hour to an hour of playtime each day," said Halen Richards. "But sometimes I just don't have the time to dedicate myself to playing videogames."

"Ideally I would love to play one or two hours a day," said Christina Pom. "But because I am overwhelmed with school work it's more like one to two hours a month."

The amount of free time I have affects how much time I'm allowed to play, said Ian Cawley. "On a good week I can squeeze in 20 hours a week; otherwise I can only fit in 10 hours a week."

"I usually play eight hours a day," said James Tervilliger. "I play three to four hours a week; otherwise I can only play in 10 hours a week."

"I usually play play off-line because I'm just too shy to play on-line," said Nina Arranza-Riley. "I only play on-line if I'm in a competitive mood," said Patrick Thompson.

"I really love to play Wii Golf. He likes it so much," said Trent Parker. "He really loves to play son on the Wii," said Trent Parker. "It's a nice mental relaxer," said Aana Voreen.

"For me it's adventure porn," said Darren Faber. "It simulates things that I can't do in real life and it gives me this nice, fake, sense of progression."

"Ultimately it's because they're just interesting in a lot of ways," said Patrick Thompson. "It's amazing to see the creativity that goes into one of these games or the skill that is required to play some of them." While the majority of people who play video games do so by themselves, others say they would prefer to game with someone else.

"I play with my 3-year-old son on the Wii," said Trent Parker. "He really loves to play Wii Golf. He likes it so much that he even wants to play golf in real life and even begs me to watch the Golf Channel."

"I play with my 3-year-old son on the Wii," said Trent Parker. "He really loves to play Wii Golf. He likes it so much that he even wants to play golf in real life and even begs me to watch the Golf Channel." A number of people are getting into gaming because their smart phones make it easier to do so.

"The only recent game I play is Angry Birds," said Lynn Padilla. "Otherwise I play old school games like Tetris and Pac-Man."

"I think I'm really addiction to Words with Friends right now," said a student. "I try to get as many of my other friends and family members to play with me and they don't even have to be in the same room with me."

Although these students enjoy playing video games, most of them would rather play off-line or only play on-line if they're in a certain mood. "I don't like to play on-line," said Halden Richards. "I've had bad problems before where I feel too connected to a world that doesn't really exist. I avoid on-line games at all cost."

Regarding on-line play, Ian Cawley says that, "It just depends on the game. I don't need a game to be on-line if it has as good single player experience that gives me a good narrative. If it is an action game with little story or reason to play the single player game I would expect the game to have a fun on-line experience."

"I only play-off line because I can't find any games worth playing on-line," said Christina Pom. "Besides, I can meet with my friends easily enough so I can just play with them in the same room."

"I play-off line because I'm just too shy to play on-line," said Nina Arranza-Riley.

Even if it is rainy the show will most likely go on. There are hardly any issues when it comes to weather.

When it comes to seeing it is best to bring a lawn chair or some blankets to lie out. "This is a great way for families to introduce kids to Shakespeare. You can make a day out of it and pack a picnic," said Fickes.

The play runs under 2 hours and starts at 7 p.m.

About 10 students from Highline were involved in the performance. According to Fickes, "It was a great way for everyone to come together and enjoy a great performance."

The Red Hot Blues Sisters play their first show in 2004 at Highway 99 in Seattle and have since then performed at the 2010 Winter Olympics. The Red Hot Blues Sisters play a mix of the blues and rock.

Leroy Thomas and the Zydeco Road Runners is a Cajun band that is known for their fast music and upbeat melodies. Zydeco is a form of folk music that developed in Louisiana in the early 19th century.

If bad weather occurs, the concert will move to the Beach Park Auditorium. Lawn chairs and blankets would be ideal for seating.

The concerts are held at the north end of the Des Moines Beach Park and start at 7 p.m. and scheduled to end at 8:30 p.m.

Shakespeare in the PARK

The Seattle Shakespeare Company will be performing The Comedy of Errors at the Des Moines Beach Park on July 30.

"This performance is free but we do ask for donations," said Seattle Shakespeare Company's Director of Communications Jeff Fickes. The Comedy of Errors is about two twins who have no prior knowledge of each other who end up crossing paths and are victims of mistaken identity.

The Seattle Shakespeare Company was founded in 1991 and has been doing free outdoor plays since 1994. This will be their second year in Des Moines.

"The actors do all the work. They set up the stage and get it ready and they take it down after the show," said Fickes.

City hosts free summer concert series

Join the Des Moines community for the Beach Park Jazz and Blues Free Concert Series. The Beach Park Jazz and Blues Free Concert Series features The Red Hot Blues Sisters on July 20, The Tallboys and Ali Marcus on July 27, Leroy Thomas and the Zydeco Road Runners on August 3 and Cherry Cherry on August 10.

"Tallboys are a string combo of bluegrass and country and Cherry Cherry is a tribute band to Neil Diamond," said Des Moines Art Commissioner Denny Steussy.

Communities provide free entertainment this summer

By AMANDA SILS
Staff Reporter

Some free community festivals and events this summer will include Burien’s annual Strawberry Festival, Federal Way’s Red White and Blue’s Festival, Kent’s Lions Street Fair and Auburn’s Good Ol’ Days festival.

The Burien Strawberry Festival will take place on Saturday June 18, 10 a.m. to 6 p.m. and Sunday, June 19, 10 a.m. to 4 p.m. at the Burien Town Square Park, 5th &152nd SW. Various shows will take place on June 18, such as a recital by Momentum Dance studio, folk music by a group called The Toy Boats and a performance by the Highline Community Symphonic Band with swing dancers from Swing-amajig.

Throughout the festival wandering performers will entertain as people stroll through the park.

Some of these include American and Folk music by the group MoZo, Cabiri theatrical Stilt Walkers and the One Love marching band, who will lead a town bike parade.

On June 19, Burien’s Strawberry festival will feature a demonstration by the Burien Belly Dance group, as well as Groupo Amoroso, a Brazilianicana and Folk music by the park.

Further into the summer, on July 4, Federal Way will hold its Red, White and Blues festival to celebrate the Fourth of July.

Fireworks, food and music will encompass the family friendly event. The festival will begin at 6 p.m. at Celebration Park, 1095 S. 324th St.

Numerous music styles such as blues and country will be played throughout the evening. For example, the Charles White Band, the Country Rock Association and Cherry Cherry, a Neil Diamond tribute band, will perform on a main stage at the park.

Food vendors will offer barbeque, sandwiches, salads and snacks. At the end of the night there will be a choreographed fireworks show literally bursting with different shapes and colors.

Further information can be found at www.cityoffederalway.com under life in Federal Way.

Just four days later, Kent will hold its 39th annual Lions Street Fair at Lake Meridian July 8 to 10.

Educational displays, an art show, diverse foods and handmade crafts are only a small part of what is planned for the event.

More than 600 street vendors from all over the country will present handcrafted and commercial displays by the lake.

The Lions Street Fair is a well-loved community affair because of the animated atmosphere created by colorful exhibits and street musicians.

For more material on the street fair, go to the website www.kcdays.com under events.

On Aug. 13 and 14 Auburn’s Good Ol’ Days festival will take place in downtown Auburn. Known as a celebration of art and life, the festival will have musicians, authors, poets, artists and athletes.

Throughout the festival there will be a barbeque, SK fun run, art show, street dance, model boat demonstration and car show.

Two stages will be set up downtown, the Mural stage and the City Hall stage, highlighting fiddlers, big bands, a dance group called the Heel Kickin’ Cloggers, and a show by the Al- legro Academy of Dance.

To find out more about the event and directions, visit www.auburngoodoldays.com.

Warped Tour not for the weak: Tips for being prepared

For many independent music fans, the Vans Warped Tour has become a right of passage and one that requires careful planning if you want to survive the weekend unscathed from the summer heat and weekend-long partying.

Warped Tour features approximately 60 bands at a number of tour stops from coast to coast, along with a handful of dates in Canada.
